**What happens if a packet goes missing?** 6.5 Calculating Packet Loss In the event of packet loss, the receiver asks for retransmission or the sender automatically resends any segments that have not been acknowledged. Although TCP can recover from packet loss, retransmitting missing packets causes the throughput of the connection to decrease.

**What happens to lost data packets?** If a packet is lost, TCP can retransmit it. The second transmission picks up lost packets and reconstructs the data stream. However, this does not mean there is no slowdown involved. The network may feel slower, as it still takes time to retransmit data.

**What is a common cause of out-of-order packets?** Out-of-order delivery can be caused by packets following multiple paths through a network, by lower-layer retransmission procedures (such as automatic repeat request), or via parallel processing paths within network equipment that are not designed to ensure that packet ordering is preserved.

**What are 5 safeguards against Internet and network attacks?**

**What technique is used to provide computer security to safeguard its information?** Encryption Encryption is a fundamental component for protecting personal data.
