What are the 4 basic of refrigeration? The simple refrigeration cycle consists of four main processes: compression, condensation, expansion, and evaporation. These processes take place respectively in the compressor, condenser, expansion valve, and evaporator.

What is the formula for refrigeration? For a refrigerator the coefficient of performance is $COP = Q_{low}/(-W)$. Details of the calculation: (a) $COP = Q_{low}/(-W)$. $(-W) = Q_{low}/COP = 120/5 \text{ J} = 24 \text{ J}$.

What are the three types of refrigeration?

How many questions can you miss on the EPA 608 test? You must score 70% to pass each test. This means you must correctly answer 18 out of 25 questions in each test. In order to be certified in any of the three EPA 608 Technician types it is required that you also pass the CORE exam. If you pass all four tests you obtain a Universal Certification.

What are the three R's of refrigeration? The three Rs of refrigeration are: Recover. Recycle, and. Reclaim.

What is COP in refrigeration? The coefficient of performance or COP (sometimes CP or CoP) of a heat pump, refrigerator or air conditioning system is a ratio of useful heating or cooling provided to work (energy) required. Higher COPs equate to higher efficiency, lower energy (power) consumption and thus lower operating costs.

What is the R value of refrigeration? The R-value is a numbered rating that indicates how well your refrigerator can resist heat. The values usually span from R-7 to R-50, with a greater number offering greater resistance to heat.

What Freon is in a fridge? While R-12 was once the go-to choice for residential/domestic refrigeration systems, Freon™ R-134a refrigerant is now most commonly used. Its versatility allows it to work in home systems ranging from small under-the-counter refrigerators to family-sized refrigeration/freezer systems with multiple cooling compartments.

What is R22 in a refrigerator? It has also been installed more in refrigeration since the phaseout of CFCs, both as a pure refrigerant and in blends. R22 can no longer be used in new equipment, but available product can be used to service existing systems. 125 LB. RETURNABLE CYL.

What are the 3 lines in refrigeration? The suction line connects the evaporator to the compressor, the discharge line connects the compressor to the condenser, and the liquid line connects the condenser to the expansion device.

What replaced Freon in refrigerators? Puron, also known as R-410A; Suva; Forane; and EcoFluor, was approved by the EPA as a substitute for Freon. It's much easier on the ozone than Freon. Additionally, Puron systems operate under higher pressure and use less energy overall than Freon systems, further increasing their environmental friendliness.

What do you mean by COP and TR? Two important terms used in refrigeration system is TR(Ton of Refrigeration)and COP (Coefficient of performance), TR is used to define the capacity of refrigeration system while COP is a ratio of useful heating or cooling provided to work required.

How many questions are on the 609 certification test? THE EPA REGULATIONS The MVAC certification is a 25-question, open-book exam. Section 609 Certification allows the purchase of any refrigerant in any size container from an auto supply house for use in cooling the passenger compartment of vehicles.
