1. What is Scrum?

Scrum is a framework for managing complex projects. It focuses on collaborating in short cycles, called sprints, to deliver value incrementally and iteratively. Scrum emphasizes empiricism, transparency, and adaptability.

2. What are the three Scrum roles?

- **Product Owner:** Responsible for setting the product vision and managing the product backlog.
- **Scrum Master:** Facilitates the Scrum process, removes impediments, and ensures adherence to Scrum principles.
- **Development Team:** Self-organizing and cross-functional, responsible for delivering the product increment.

3. What are the five Scrum events?

- **Sprint Planning:** Team plans the work to be completed in the upcoming sprint.
- **Daily Scrum:** Daily stand-up meeting to discuss progress, impediments, and adjustments.
- **Sprint Review:** Presentation of the completed product increment and gathering feedback.
- **Sprint Retrospective:** Team reflects on the sprint, identifies areas for improvement, and plans for the next sprint.
- **Sprint Backlog Refinement:** Backlog items are reviewed and prioritized for the upcoming sprint.

4. What are the three Scrum artifacts?

- **Product Backlog:** A prioritized list of features and requirements for the product.
- **Sprint Backlog:** A set of work items that the team commits to completing in a sprint.
- **Burndown Chart:** A visual representation of progress made towards completing the sprint backlog.

5. What are the principles of Scrum?

Scrum is based on the following principles:

- **Empiricism:** Base decisions on observation and measurement.
- **Transparency:** Make all information visible to the team and stakeholders.
