### Section 4.2: Rational Expressions and Functions

**Question 1:** What is a rational expression?

**Answer:** A rational expression is an expression that can be written as a quotient of two polynomials. In other words, it is a fraction where both the numerator and the denominator are polynomials.

**Question 2:** What is the domain of a rational expression?

**Answer:** The domain of a rational expression is the set of all real numbers except for the values that make the denominator zero. These values are called the zeros of the denominator.

**Question 3:** How do you simplify a rational expression?

**Answer:** To simplify a rational expression, you can factor the numerator and denominator and cancel any common factors. You can also remove any factors that are not in the denominator.

**Question 4:** How do you find the asymptotes of a rational expression?

**Answer:** The vertical asymptotes of a rational expression are the values that make the denominator zero. The horizontal asymptotes are the values that the expression approaches as  $x$  approaches infinity or negative infinity.

**Question 5:** How do you graph a rational expression?

**Answer:** To graph a rational expression, you need to first find the asymptotes. Then, you can plot a few additional points and connect them with a smooth curve.
