What is the strongest bone in your body? The femur is the longest, strongest, and heaviest bone in the human body, making it a difficult one to break.

What are the 4 main organs of the skeletal system? The skeletal system is imperative for movement as well. It also helps create the red blood cells that carry oxygen around your body, allowing you to make energy and stay alive. Today, we're going to look at the four main organs of the skeletal system: bones, cartilage, ligaments, and tendons.

What are 5 facts about the skeletal system?

What connects our bones together? Ligaments often connect two bones together, particularly in the joints: Like strong, firmly attached straps or ropes, they stabilize the joint or hold the ends of two bones together.

What are the 5 parts of a skeleton? The appendicular and axial skeleton are two different divisions of the human skeleton. The axial skeleton comprises the spinal column, rib cage, skull, and other supporting bones. The shoulder girdle, pelvic girdle, and upper and lower limb bones form the appendicular skeleton, connected to the axial skeleton.

Which skeleton is female? The pelvis tells the story. Distinct features adapted for childbearing distinguish adult females from males. Other bones and the skull also have features that can indicate sex, though less reliably. In young children, these sex-related features are less obvious and more difficult to interpret.

What is skeletal system question answer? The skeletal system mainly provides a structural framework and supports the body. It is made up of 206 bones in an adult human. It comprises bones, cartilage, ligaments and tendons that connects bones and bones to muscles. The human skeletal system provides definite shape to the body and protection to internal organs.

Which bone protects the brain? The cranium, or skull, is composed of 22 bones and is divided into two regions: the neurocranium (which protects the brain) and the viscerocranium (which forms the face). The skull also supports tendinous muscle attachments and allows neurovascular passage between intracranial and extracranial anatomy.

What is the smallest bone in the body? Located in the middle ear, the stapes is the smallest bone in the human body. Damage to this bone may cause partial or complete hearing loss. Before becoming recognized by the brain, sound waves must enter the auditory canal, go through the tympanic membrane (eardrum), and then enter the middle ear compartment.

What is the system of the skeletal? The skeletal system is made up of the bones that give structure to the human body.
