Wireshark Exercises: Solutions to Common Questions

Wireshark is a popular network protocol analyzer used to troubleshoot and monitor network traffic. Here are solutions to five common exercises often encountered by Wireshark users:

Exercise 1: Identifying the HTTP Protocol

Question: How do I identify HTTP packets in Wireshark?

Answer: Filter the packets by "http" in the display filter field or use the Protocol Hierarchy pane to find and expand the HTTP traffic.

Exercise 2: Analyzing TCP Streams

Question: How do I analyze TCP streams in Wireshark?

Answer: Right-click on a TCP packet and select "Follow TCP Stream" to view a reconstructed view of the TCP conversation. Use the "Payload" window to examine the actual data exchanged between the hosts.

Exercise 3: Finding a Specific IP Address

Question: How do I search for packets sent to or from a specific IP address?

Answer: Use the display filter "ip.src == " or "ip.dst == " to find packets with the specified source or destination IP address.

Exercise 4: Filtering by Packet Size

Question: How do I filter packets based on their size?

Answer: Use the display filter "len > " or "len < " to find packets that are larger or smaller than a specified size.

Exercise 5: Creating a Custom Wireshark Display Filter

Question: How do I create a custom display filter to meet specific criteria?

Answer: Use logical operators such as "and", "or", and "not" to combine multiple filter expressions. For example, to find packets with both HTTP and TCP protocols: "http and tcp".

Theory and Methods in Social Research

Q1. What is social research and why is it important?
