- Collagen stimulation for long-term results

### **What is the Procedure Like?**

A Threading PDO Thread Lift is performed under local anesthesia. The doctor will insert the PDO threads into the treatment area using a thin needle. Once the threads are in place, they will be anchored to the underlying tissue to create the desired lift and contour. The procedure typically takes 1-2 hours.

### **What is the Recovery Time?**

Recovery from a Threading PDO Thread Lift is minimal. There may be some swelling and bruising around the treatment area, which typically subsides within a few days. Most individuals can return to their normal activities within 24 hours. The full results of the treatment will develop over the following 2-3 months as collagen production increases.
