What are the answers to a quadratic equation? The solutions of a quadratic equation $ax^2 + bx + c = 0$ are given by the quadratic formula $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$. So to solve a quadratic equation using quadratic formula, just get the equation into standard form $ax^2 + bx + c = 0$, and apply the quadratic formula.

What is the quadratic formula text form? Remember, to use the Quadratic Formula, the equation must be written in standard form, $ax^2 + bx + c = 0$.

Are there 2 answers for the quadratic formula? A quadratic equation with real or complex coefficients has two solutions, called roots. These two solutions may or may not be distinct, and they may or may not be real.

How do I solve a quadratic? Set the equation equal to zero. If the quadratic side is factorable, factor, then set each factor equal to zero. If the quadratic equation involves a SQUARE and a CONSTANT (no first degree term), position the square on one side and the constant on the other side. Then take the square root of both sides.

What is the quadratic equation typed out? A quadratic equation is a second order equation written as $ax^2+bx+c=0$ where a , b , and c are coefficients of real numbers and $a \neq 0$.

What is quadratic equation 3 examples? Examples of quadratic equations include all of these: $y = x^2 + 3x + 1$. $y = x^2$. $y = 2x^2 + 4x - 9$.

What are the 3 quadratic formulas?

What is a quadratic equation responses? Quadratic equations are second-degree algebraic expressions and are of the form $ax^2 + bx + c = 0$. The term "quadratic" comes from the Latin word "quadratus" meaning square, which refers to the fact that the variable x is squared in the equation. In other words, a quadratic equation is an "equation of degree 2."

What do the answers to the quadratic formula represent? Answer and Explanation: The solutions of a quadratic equation represent the x -intercepts of a parabola. Since there is a plus/minus sign, we need to do the calculation twice, once using the addition sign, and once using the subtraction sign. This tends to result in 2 solutions, or 2 x -intercepts.

How many answers do you expect to get for a quadratic equation? If $b^2 - 4ac$ is positive (>0) then we have 2 solutions. If $b^2 - 4ac$ is 0 then we have only one solution as the formula is reduced to $x = [-b \pm 0]/2a$. So $x = -b/2a$, giving only one solution. Lastly, if $b^2 - 4ac$ is less than 0 we have no solutions.

Does every quadratic equation have 2 answers? As we have seen, there can be 0, 1, or 2 solutions to a quadratic equation, depending on whether the expression

inside the square root sign, $(b^2 - 4ac)$, is positive, negative, or zero.
