## **Standards, Goals, and Jump Math for 4.NBT.A**

### **Paragraph 1: Introduction**

The Common Core State Standards (CCSS) provide clear and specific guidelines for what students should know and be able to do in mathematics. In Grade 4, Number and Operations in Base Ten (4.NBT) focuses on developing students' understanding of place value and operations with multi-digit numbers.

### **Paragraph 2: Goal 4.NBT.A**

Goal 4.NBT.A states that students will use place value understanding and properties of operations to perform multi-digit arithmetic. This includes:

- Reading and writing multi-digit numbers up to 1,000,000
- Understanding the place value of each digit
- Adding and subtracting multi-digit numbers with and without regrouping

### **Paragraph 3: Question**

A question that aligns with 4.NBT.A might be:

"Solve:  $3,256 + 4,789$ "

### **Paragraph 4: Answer**

To answer this question, students would use their understanding of place value and properties of operations:

- Line up the numbers vertically, making sure the digits in the same place value are aligned.
- Add the digits in each column, starting from the right.
- If necessary, regroup by exchanging 10 ones for 1 ten when adding in the tens column.
- Continue adding until all columns have been added.

### **Paragraph 5: Jump Math Connection**

Jump Math is an instructional program that aligns with the CCSS. For 4.NBT.A, Jump Math offers activities and games that help students develop their place value understanding and number sense. These activities include:

- Mental math games that require students to understand the relationship between different place values.
- Problem-solving tasks that involve adding and subtracting multi-digit numbers.

- Hands-on activities that use manipulatives to represent multi-digit numbers and operations.

By using Jump Math alongside the CCSS, students can develop a deep and conceptual understanding of place value and operations with multi-digit numbers.
