Solution of Discrete-Time Control Systems by Ogata

Question: How to obtain the state transition matrix of a discrete-time control system?

Answer: The state transition matrix can be obtained by solving the state equation of the system:

$$x(k+1) = Ax(k) + Bu(k)$$

where $x(k)$ is the state vector, $u(k)$ is the input vector, and A and B are constant matrices. The state transition matrix, denoted as Φ , is given by:

$$\Phi = \exp(At)$$

Question: How to determine the controllability of a discrete-time control system?

Answer: A discrete-time control system is controllable if there exists a control sequence $u(k)$ that can transfer the system from any initial state $x(0)$ to any final state $x(t)$ in finite time. The controllability matrix is given by:

$$W_c = [B, AB, A^2B, \dots, A^{(n-1)}B]$$

where n is the order of the system. The system is controllable if the controllability matrix is full rank.

Question: How to calculate the steady-state response of a discrete-time control system?

Answer: The steady-state response of a system is the output that occurs when the system is subjected to a constant input. It can be calculated by solving the following equation:

$$x(ss) = (I - A)^{-1}Bu(ss)$$

where I is the identity matrix and $u(ss)$ is the constant input.

Question: How to design a state feedback controller for a discrete-time control system?

Answer: A state feedback controller is a controller that uses the state vector of the system to generate control inputs. It can be designed by pole placement, which involves finding a state feedback matrix K such that:

$$Ax(k) + BKu(k) = A_c x(k)$$

where A_c is the desired closed-loop system matrix.

Question: How to analyze the stability of a discrete-time control system using the Lyapunov stability theorem?

Answer: The Lyapunov stability theorem states that a system is stable if there exists a positive definite function $V(x)$ such that:

$$\Delta V(x) = V(x(k+1)) - V(x(k)) < 0$$

for all $x \neq 0$. The function $V(x)$ is called a Lyapunov function. If a Lyapunov function can be found for a system, then the system is asymptotically stable.
