## **Your First Bonsai: A Beginner's Guide to Bonsai Growing**

The art of bonsai, which originated in ancient China, involves cultivating miniature trees in containers for aesthetic enjoyment. As a beginner, understanding the basics of bonsai care can be daunting, but here is a simplified guide to help you get started.

### **What Is Bonsai?**

Bonsai is the practice of growing naturally occurring trees in miniaturized form by carefully pruning and shaping their trunks, roots, and branches. The goal is to create a living artwork that evokes the essence of larger trees in nature.

### **Choosing Your First Bonsai**

When selecting your first bonsai, consider tree species that are easy to care for and tolerant of beginner mistakes. Popular options include junipers, pines, and ficus. Choose a tree that is healthy, has a strong root base, and is well-established in its container.

### **Basic Bonsai Care**

Bonsai require specific care to maintain their health and beauty. Water your bonsai regularly, allowing the soil to dry out slightly between watering. Fertilize your tree every 2-3 weeks during the growing season. Provide adequate sunlight, either outdoors or under grow lights. Prune your bonsai regularly to maintain its shape and encourage new growth.

### **Understanding the Bonsai**

To appreciate the art of bonsai, it is essential to understand its symbolism and principles. The miniature tree represents the resilience and beauty of nature, while the container symbolizes the limitations of the environment. Bonsai care is not only about aesthetics but also about fostering a connection with the natural world.

## Common Questions

- **How often should I water my bonsai?** Water your bonsai when the top inch of soil is dry to the touch.
- **What kind of soil should I use for my bonsai?** Use a well-draining bonsai soil mix that is composed of organic matter, such as peat moss or pine bark.
- **How do I prune my bonsai?** Use sharp, clean pruning shears to remove excess branches and maintain the desired shape. Prune during the growing season, not during the winter months.

## Tastes of Paradise: A Social History of Spices, Stimulants, and Intoxicants

**Sekhukhune District Physical Science Common Test No. 1 Grade 12 Question Paper 2014**

**Question 1:**

A 20 kg object is dropped from rest from a height of 50 m above the ground. Calculate:

(a) The time it takes to reach the ground. (b) Its velocity just before it hits the ground.

**Answer:**

(a) Using the equation of motion:  $h = 0.5gt^2$ , where  $h$  is the height,  $g$  is the acceleration due to gravity ( $9.8 \text{ m/s}^2$ ), and  $t$  is the time taken.

$$0.5 \times 9.8t^2 = 50 \quad t^2 = 10.2 \quad t = 3.2 \text{ s}$$

(b) Using the equation of motion:  $v = u + gt$ , where  $v$  is the final velocity,  $u$  is the initial velocity ( $0 \text{ m/s}$ ),  $g$  is the acceleration due to gravity, and  $t$  is the time taken.

$$v = 0 + 9.8 \times 3.2 \quad v = 31.36 \text{ m/s}$$

**Question 2:**

A 50 kg object is moving at a speed of 20 m/s. What force is required to stop the object in 5 seconds?

**Answer:**

Using the equation of motion:  $v = u + at$ , where  $v$  is the final velocity (0 m/s),  $u$  is the initial velocity (20 m/s),  $a$  is the acceleration, and  $t$  is the time taken (5 s).

$$a = (v - u) / t \quad a = (0 - 20) / 5 \quad a = -4 \text{ m/s}^2$$

Using Newton's second law:  $F = ma$ , where  $F$  is the force,  $m$  is the mass (50 kg), and  $a$  is the acceleration.

$$F = 50 \times (-4) \quad F = -200 \text{ N}$$

**Question 3:**

A current of 2 A flows through a resistor of resistance 10  $\Omega$ . Calculate the:

(a) Potential difference across the resistor. (b) Power dissipated by the resistor.

**Answer:**

(a) Using Ohm's law:  $V = IR$ , where  $V$  is the potential difference,  $I$  is the current, and  $R$  is the resistance.

$$V = 2 \times 10 \quad V = 20 \text{ V}$$

(b) Using the formula:  $P = IV$ , where  $P$  is the power dissipated,  $I$  is the current, and  $V$  is the potential difference.

$$P = 2 \times 20 \quad P = 40 \text{ W}$$
