Young Language Learners: Motivation and Attitudes

- **What is the study about?**

This longitudinal comparative study by Sybille Heinzmann explores the motivation and attitudes of young language learners in two different settings: an English-German bilingual setting in Germany and a French-English immersion setting in Canada.

- **What were the research questions?**

Heinzmann's study sought to answer the following questions:

1. How do young language learners' motivation and attitudes towards language learning develop longitudinally?
2. What are the factors that influence these changes?
3. How do these factors compare between the bilingual and immersion settings?

- **What were the key findings?**

The study found that young language learners' motivation and attitudes generally remained high over time. However, there were some fluctuations and differences between the two settings:

- In the bilingual setting, students' motivation and attitudes declined slightly in middle school, but then rose again in high school.
- In the immersion setting, students' motivation and attitudes remained relatively stable throughout the study period.

- **What factors influenced motivation and attitudes?**

Heinzmann identified several factors that influenced young language learners' motivation and attitudes, including:

- Classroom instruction and teacher support
- Peer relationships and opportunities for interaction
- Students' perceptions of their own language abilities
- Students' cultural backgrounds and identities

- **What were the implications for language teaching?**

Heinzmann's findings suggest that teachers can play an important role in fostering young language learners' motivation and attitudes. By creating supportive and engaging learning environments, providing opportunities for interaction and peer collaboration, and encouraging students to reflect on their own language abilities, teachers can help students maintain their motivation and develop positive attitudes towards language learning.
