**What kind of discharge do you have with ectopic pregnancy?** Symptoms of an ectopic pregnancy Symptoms can include a combination of: a missed period and other signs of pregnancy. tummy pain low down on one side. vaginal bleeding or a brown watery discharge.

**How do hospitals treat ectopic pregnancies?** Medication. An early ectopic pregnancy without unstable bleeding is most often treated with a medication called methotrexate, which stops cell growth and dissolves existing cells. The medication is given by injection.

**What are the discharge instructions for methotrexate for ectopic pregnancy?** Do not drink alcohol until your hCG level is negative. Do not have sexual intercourse for at least 2 weeks after your last injection. Talk with your doctor before having sex again. Use condoms or other birth control until your hCG is negative and you want to try to get pregnant again.

**What is the medical management protocol for ectopic pregnancy?** Medicine. If an ectopic pregnancy is diagnosed early but active monitoring isn't suitable, treatment with a medicine called methotrexate may be recommended. This works by stopping the pregnancy from growing. It's given as a single injection into your buttocks.

**What is ectopic discharge?** Injured afferent neurons produce spontaneous activity that is generated away from the normal impulse generation site. Since this activity, referred to as ectopic discharges, may play a significant role in neuropathic pain, it is important to systematically analyze the activity in various pain states.

**Does your belly grow with an ectopic pregnancy?** During a typical pregnancy, your bump grows as your uterus gets bigger, Greves says. “The belly doesn't grow with ectopic pregnancy because the pregnancy doesn't have enough space to expand and grow normally in the fallopian tubes,” Chuang says.

**How long are you in hospital after ectopic pregnancy?** An operation to remove the ectopic pregnancy will involve a general anaesthetic. The surgery will be either: o Laparoscopy – the stay in hospital is about 1 to 2 days and the recovery is about 2 to 4 weeks. o Open surgery – known as a laparotomy – is performed through a larger cut in your lower abdomen.

**Is an ectopic pregnancy considered a miscarriage?** An ectopic embryo will not survive and the pregnancy will miscarry. The consequences of an ectopic pregnancy can be serious and even life-threatening. It is important to get medical advice immediately if you could be pregnant and experience any of the symptoms of ectopic pregnancy.

**How painful is ectopic pregnancy?** Often, the first warning signs of an ectopic pregnancy are pain or vaginal bleeding. There might be pain in the pelvis, abdomen, or even the shoulder or neck (if blood from a ruptured ectopic pregnancy builds up and irritates certain nerves). The pain can range from mild and dull to severe and sharp.

**Do you flush the toilet twice when taking methotrexate?** dispensing and giving methotrexate or • handling body fluids (eg, double flushing the toilet). These precautions are designed for cancer treatment and not low-dose methotrexate.

**How long does it take for an ectopic pregnancy to dissolve after having methotrexate?** According to a study, for women with ectopic pregnancies in a Fallopian tube who are treated with methotrexate (with hCG of 1000–5000 IU/L before treatment), it takes an average of 28 days for the ectopic pregnancy to resolve (when medical treatment is successful).

**What is the protocol for pregnancy after ectopic?** While there is no clear, researched evidence on how long a couple should wait to try to conceive after having treatment for ectopic pregnancy, we and other medical professionals advise

that it may be best to wait for at least three months or two full menstrual cycles (periods) before trying to conceive for both ...

**At what hCG level does an ectopic rupture occur?** The risk of tubal rupture was similar across a wide range of  $\beta$ -hCG values. Another study identified 38 instances of rupture among women with serum levels ranging from 10 to 189 720 IU/L. Thus, a single serum  $\beta$ -hCG measurement cannot exclude ectopic pregnancy or predict the risk of rupture unless it is less than 5 IU/L.

**How to terminate an ectopic pregnancy early?** Medication. An early ectopic pregnancy may be managed with medicine. If you have low levels of hCG -- a hormone your body makes when you're pregnant and there's no damage to the fallopian tube -- your doctor can give you an injection of a drug called methotrexate (Trexall).

**What makes you not a candidate for methotrexate?** To make sure it's safe for you, tell your doctor before taking it if you: have ever had an allergic reaction to methotrexate or any other medicine. are pregnant, trying to get pregnant or are breastfeeding. have severe liver or kidney disease, or a blood disorder.

**What is the discharge of ectopic pregnancy?** Symptoms of an ectopic pregnancy Symptoms can include a combination of: a missed period and other signs of pregnancy. tummy pain low down on one side. vaginal bleeding or a brown watery discharge.

**Is ectopic pregnancy a STD?** In most cases, conditions that slow down or block the movement of the egg down your fallopian tube cause ectopic pregnancy. This could happen because: You have scar tissue, adhesions or inflammation from a prior pelvic surgery. Your fallopian tubes have damage, such as from a sexually transmitted infection (STI).

**What are 3 signs of an ectopic pregnancy?**

**What week do ectopic pregnancies rupture?** But the structure usually bursts between 6 and 16 weeks. A ruptured ectopic pregnancy can cause severe bleeding. If the bleeding isn't stopped, your body might start to shut down due to the blood loss (hemorrhagic shock), and the odds of dying from it increase.

**Can you go full term with ectopic pregnancy?** Ectopic pregnancy may be life threatening. The pregnancy cannot continue to birth (term). Effective treatment requires either medical treatment to end the pregnancy or surgical removal of the pregnancy.

**Does your body change after an ectopic pregnancy?** Yes. Although the pregnancy is not in the uterus, the hormones produced by the early pregnancy cause the lining of the uterus to become thickened. Therefore after your ectopic pregnancy is treated, you should expect some heavy period-like bleeding for a week or so.

**How do you know you are carrying an ectopic pregnancy?** Often, the first warning signs of an ectopic pregnancy are light vaginal bleeding and pelvic pain. If blood leaks from the fallopian tube, you may feel shoulder pain or an urge to have a bowel movement. Your specific symptoms depend on where the blood collects and which nerves are irritated.

**What are the early signs of ectopic pregnancy rupture?**

**How do I know if I have an ectopic pregnancy without bleeding?** It's also possible to have an ectopic pregnancy without any vaginal bleeding or pain (3). So, how can you know if you have an ectopic pregnancy? Some healthcare providers recommend an early first-trimester ultrasound to see where the pregnancy is located (1).

### **The Truth about Essential Oils and Cancer: Unmasking the Evidence**

Essential oils, derived from plants, have gained significant popularity for their alleged therapeutic benefits. However, when it comes to cancer treatment, it's crucial to separate fact from fiction. This article examines the scientific evidence regarding essential oils and cancer, providing a clear understanding of their potential and limitations.

**Q: Can essential oils cure cancer?** A: There is no credible scientific evidence to support the claim that essential oils can cure cancer. While some studies suggest certain oils may exhibit antitumor properties in vitro (in laboratory settings), much more research is needed to determine their efficacy in humans.

**Q: Do essential oils have any benefits for cancer patients?** A: Essential oils may provide some symptomatic relief for cancer patients. For example, lavender oil is known for its calming and stress-reducing effects, while peppermint oil can help alleviate nausea and vomiting. However, it's important to note that these benefits do not translate into a cure for cancer.

**Q: Should cancer patients use essential oils as a primary treatment?** A: No. Essential oils should never be used as a substitute for conventional cancer treatments. They may interact negatively with certain medications or therapies, and relying solely on oils can delay or compromise appropriate medical care.

**Q: How can essential oils be used safely for cancer patients?** A: If using essential oils for symptomatic relief, it's crucial to consult with a qualified healthcare professional. They can advise on safe dosages, methods of application, and potential interactions. Always dilute essential oils with a carrier oil, such as coconut or jojoba oil, before applying them topically.

**Q: What should cancer patients know about essential oils?** A: Cancer patients should approach essential oils with caution. While they may provide temporary relief from certain symptoms, they do not offer a cure or prevent cancer. It's essential to rely on evidence-based treatments recommended by medical professionals and to use essential oils as a complementary measure, if at all.
