## **The Nature of Light and Colour in the Open Air**

### **What is light?**

Light is a form of electromagnetic radiation that can be detected by the human eye. It is also a source of energy, and can be used to heat objects. The speed of light is 300,000 kilometres per second, and it travels in waves.

### **What is colour?**

Colour is a perception of the human eye, and is caused by the way that light interacts with objects. When light hits an object, some of the light is absorbed and some is reflected. The reflected light is what we see as colour.

### **How do light and colour interact with the open air?**

When light travels through the open air, it can be scattered by particles in the atmosphere. This scattering is what causes the blue sky. The shorter wavelengths of light (blue and violet) are scattered more than the longer wavelengths (red and orange), which is why the sky appears blue.

### **How does the time of day affect the colour of the sky?**

The colour of the sky changes throughout the day. At sunrise and sunset, the sky appears red because the light has to travel through more of the atmosphere to reach our eyes. The longer wavelengths of light (red and orange) are less scattered than the shorter wavelengths, so they are what we see at these times of day.

### **How does the weather affect the colour of the sky?**

The weather can also affect the colour of the sky. Clouds can scatter light, and this can make the sky appear white or grey. Rain can also scatter light, and this can make the sky appear dark and gloomy.

### **How to diagnose a TV problem?**

**How can I solve my TV problem?** Check if the cable is firmly connected to the TV and the connected device and make sure it is not loose. Use a spare cable to replace the currently used one and see if the situation will improve. Use another input terminal of the TV. Connect your device to other input terminals of your TV.

### **What are the common issues encountered in LCD TVs?**

#### **How to reset an LCD TV?**

**How to tell if an LCD is damaged?** If you notice any discoloration or 'spots' on your computer's display, this could be an indication of a damaged LCD panel. Additionally, sudden blackouts or strange lines across the monitor could also suggest a problem with the hardware components inside the device.

**How do I know if my LCD TV is damaged?** Signs That Your TV Has A Broken LCD Screen  
Odd lines or patterns – Lines or bars across the screen can indicate a broken LCD screen.  
Dead pixels – Dead pixels are individual pixels that are stuck on a single color. They can appear as black, white, or any other color.

**Why is my TV working but not the screen?** Poor Cable Connections Once you're sure the input source is working properly, and you have the right input settings, check the cable connections. In many instances where the TV screen is black but the audio works, poor or misplaced cable connections could be the issue.

**How do I get my TV screen back to normal?** This option may be called "Picture Size," "Aspect Ratio," "Screen Fit," or something similar. To find this option, go to your TV's settings menu and look for the display or picture options. Once you've found the option, select it and choose the option that best fits your screen.

**What to do if TV is not responding?**

**What are the symptoms of bad LCD?** Common signs of LCD display damage may include cracks or breaks on the screen, dead or stuck pixels that show one color or no color at all, lines, spots, or blobs on the screen, flickering or fading of the backlight, distorted colors or contrast, blurry or ghost images, and no image or signal.

**What is the average lifespan of a LCD TV?** Things You Should Know. LED TVs have the longest life span (11-16 years) with low brightness settings applied. Plasma TVs last only 5-7 years, while LCD screens last 5-10 years. Keep your new TV longer using its Energy Saving mode and a surge protector.

**How do you troubleshoot an LCD screen?** Make sure your source is on and firmly connected. If the LED on the monitor is amber, this means the monitor is receiving power but not receiving a video signal from your source. Ensure the monitor is set to the correct input and try swapping out sources to determine if that is the root of the problem.

**How to reboot an LCD?**

**Can you fix a LCD TV screen without replacing it?** Unfortunately, not all TV screens can be repaired. The type of television you have, for example, LED or LCD TV, as well as the extent of the damage will determine whether or not a repair is an option. In some cases, it may be possible to have the screen repaired by a professional.

**Do TVs have a reset button?** If that happens, you can force your TV to reset by following these steps: Using a straightened paper clip or ball-point pen, press and hold the recessed RESET button on your TV connector panel. Continue to hold the RESET button for approximately 15 seconds.

**How do I test my LCD?** Ensure the monitor is plugged into a known working AC outlet. Turn on the monitor. The Power indicator light will turn on and green, and a CABLE DISCONNECTED box will appear with four color bars (red, green, blue and white). This indicates the LCD is functioning properly.

**Can a damaged LCD TV screen be repaired?** A cracked TV screen can be repaired or replaced by trained professionals. Due to a cracked screen being the most 'intense' type of damage, this would need to be assessed by a technician and conducted accordingly. TV screens can be easily damaged and, due to their design, are somewhat fragile and delicate.
