ODE is the flagship native-speaker desk dictionary from Oxford Dictionaries for British English. It has a much longer headword list than OALD and definitions written to a much higher level; also fewer, shorter examples.

**Is Oxford Advanced Learner's dictionary good?** It is my favourite dictionary in the whole world. The OALD is a dictionary for learners of English. It is for advanced learners, but it is still aimed at non-native speakers of English. The OALD makes use of a defining vocabulary, which is a list of about 3000 words that can be used in definitions.

**What words have been removed from the Oxford dictionary?** These include Vitamin G, snollygoster, hodad, frutescent, and sternforemost. Each of these terms has the necessary attribute of just not being useful or used anymore. Vitamin G used to be the term for what's now known as riboflavin. Hodad comes from the 1960s and basically means a surfer poseur.

**Is 7.5 IELTS fluent?** A: You are considered fluent when you reach a CEFR C2. To be considered C2 without any ambiguity, you need a minimum band score of 8.5 at your IELTS test. An 8 band can be interpreted as borderline, and some universities can consider that either C1 or C2.

**What is the most popular colored pencil?**

**What is the best paper for colored pencil realism?** In general, any hot press watercolor paper works well with colored pencils. Next you have the Legion Stonehenge Paper, whose vellum (medium) texture is very popular with colored pencil artists. Lastly, I recommend the Strathmore 500 Bristol Board, which is perfect if you like a smooth texture.

**Why are colored pencils so expensive?**

**What Coloured pencils does CJ Hendry use?** For her colored pencil drawings, Hendry usually sticks to the same brand of pencil: Caran d'Ache.

**Is there no 1 pencil?** Unraveling the Numeric Grading System Instead of the varied H, B, and HB gradations, it employs straightforward numbering: #1: Softest lead, akin to 'B' in the HB system. #2: Medium, comparable to 'HB'. #3: Hardest lead, similar to 'H'.

**What is the oldest colored pencil brand?** The first art color pencils were invented and produced in 1924 by Faber-Castell and Caran d'Ache. Berol started making its colored pencils in 1938. Other manufacturers that made color pencils during the late 30s and early 40s were Derwent, Progresso, Lyra Rembrandt, and Blick Studio.

**What paper is best for Faber Castell color pencils?** Journal, writing, drawing and sketching paper/pads are most commonly used. One of the color pencil artists that we have worked with prefers Stonehenge Paper. The acid-free paper is made in the USA and has a smooth surface that is slightly mottled. With good "tooth" - the paper holds color well.

**What paper is best for Polychromos?** Bristol Board As such it allows for very detailed mark-making for crisp application of colour – perfect for scientific or botanical illustration.

**What sketchbook is good for colored pencils?** For sketching with colored pencils, the 130 gsm sketchbook paper you have will work just fine. In general, sketchbook papers are usually lighter weight than drawing papers, so they are ideal for practicing, sketching, trying out new techniques, planning out works of art, and creating quick studies.

**Why is Staedtler so expensive?** The Artist Grade colored pencils will be more expensive, but the quality is worth it. They contain more pigment and less filler, which results in richer color. They are also lightfast, which means they will last longer than drawings made with Student Grade colored pencils.

**How can you tell if colored pencils are good quality?** Some soft colored pencils are smooth and creamy, while others might be crumbly and grainy. Most artist grade pencils are on the softer side, which is partly because they contain less binder and filler, and more pigment, resulting in bolder, more vibrant colors.

**Why are polychromos so expensive?** You get an extra 30 pencils with the Prismas and at a cheaper price, but the singles are a bit more expensive to restock your set. Polys really are much better quality though, so I can see why they command a higher price than the Prismas.

**What pencils did Leonardo da Vinci use?** Leonardo da Vinci liked to use a red chalk called sanguine for many of his drawings. He also used black chalk or a combination of the two. Charcoal is a common tool for drawing today. In da Vinci's time, pencils had yet to be invented, and metal point was a drawing tool, which took much more effort.

**Who makes the best colored pencils for artists?**

**Where are Staedtler colored pencils made?** Almost two thirds of the production take place in the four production facilities in Nuremberg, Germany, though some of its products are made in Japan. Its "Noris" line of pencils is extremely common in British schools.

**What does f mean on a pencil?** The F pencil grade means Fine. This pencil is hard which means that it maintains a fine point. What makes a pencil grade harder or softer? The core of a graphite pencil is a mix of graphite and clay filler.

**Is graphite toxic?** Graphite is relatively nonpoisonous. There may be no symptoms. If symptoms do occur, they may include stomachache and vomiting, which could be from a bowel obstruction (blockage). The person may choke while swallowing the pencil.

**Is HB or 2B better for writing?** HB and 2B are different graphite grades used in art pencils. HB is a medium hardness pencil, while 2B is softer and darker. Artists use HB pencils for general writing and sketching, while 2B pencils are preferred for shading due to their ability to produce darker tones and smoother gradients.

**What do Americans call pencil crayons?** A large portion of Canadians refers to them as 'pencil crayons' whereas Americans tend to call them 'coloured pencils. ' Meanwhile, in Britain, they are commonly referred to as 'colouring pencils.

**Which country made Faber-Castell colored pencils?** At the headquarters in Stein (Germany), around 200 million wood-cased pencils are produced every year.

**Are Faber-Castell polychromos non-toxic?** The pencils are acid-free, water-resistant and smudgeproof. There are no harmful pigments used. All products are certified non-toxic by a board certified toxicologist.

**Do Faber-Castell colored pencils blend well?** Because they are not very soft, these colored pencils layer nicely and require minimal colored pencil blending.

**Is watercolor paper good for colored pencil?** Don't get too worried about the different paper types (e.g. watercolor vs. drawing vs. printmaking) because they will all work well with colored pencils to some degree.

**What are Faber-Castell Pitt pencils?** PITT pastel pencils have wax-free leads; drawings can be wiped just as with pastel crayons, so need to be fixed afterwards. The 60 bright colours contain a high proportion of pigment; they are highly light-fast and do not change colour appreciably when fixed.

**Can you mix prismacolor and Polychromos?** Faber-Castell makes a professional brand of colored pencil called Faber-Castell Polychromos Pencils, which contain high-quality pigments and have a good lightfastness rating. It would be okay to use these with your Prismacolors, since they are both top quality colored pencils.

**Should I get Prismacolor or Polychromos?** The Prismacolor drawing is a lot more vibrant, but is still significantly grainier than the Polychromos drawing. Another plus for Polychromos colored pencils is that they are oil-based. Prismacolors are wax-based, and sometimes a Prismacolor drawing will develop a thin, waxy film on the surface called wax bloom.

**Are Polychromos erasable?** The pigment is even somewhat erasable, though it does leave some color behind. The coverage of the soft lead is pretty amazing.

**What is the most popular pencil in the world?**

**Which Colour pencil do artists use?** Prismacolor Premier Colored Pencils are a popular choice among artists. They have a soft wax core that allows for smooth and

even coloring, making them perfect for blending and layering. They come in a wide range of colors, including metallic and neon shades.

**What is the most popular pencil for drawing?** H, F, HB and B: A popular go-to for simple sketches and writing. HB is often used as a multi-purpose pencil because it's clear enough to write and draw but has minimal smudging. B grades: The softer texture and darker marks make these pencils ideal for shading and tonal modelling.

**What is the most popular pencil number?** 2/HB core that makes smooth, dark marks. Even though darkness and hardness varies among brands, No. 2 and/or HB pencils are widely considered to be the ideal lead grade for writing (and they're required for many standardized tests), which makes this Golden Bear pencil a perfect choice for elementary school and beyond.

**Why is Staedtler so expensive?** The Artist Grade colored pencils will be more expensive, but the quality is worth it. They contain more pigment and less filler, which results in richer color. They are also lightfast, which means they will last longer than drawings made with Student Grade colored pencils.

**Which country is famous for pencils?** Nuremberg, Germany was the birthplace of the first mass-produced pencils in 1662. Spurred by Faber-Castell (established in 1761), Lyra, Steadtler and other companies, an active pencil industry developed throughout the 19th century industrial revolution.

**Why are Blackwing pencils so expensive?** In the case of the original Blackwing 602, the reason they can be so expensive is because supply is low and demand is high. Mr. Faber ended production of the pencils at his New York City factory decades ago, and the pencil's popularity has steadily grown ever since.

**What is the best brand of colored pencil?**

**Why are Prismacolor pencils so expensive?** Prismacolor colored pencils are professional grade and cost over \$1 per pencil. Compared to cheaper brands such as Crayola, Prismacolors are infinitely more pigmented and smooth. When used on paper, these pencils don't leave white spaces that take away from the drawing like other brands.

**Which is better, Faber Castell or Derwent?** The differences between Derwent and Faber Castell's pencils Faber Castell's pencils feel slightly harder and glide across the page like polished stone effortlessly. Derwent's graphite pencils are a little more chalky as they are dragged across the page, so I can feel the texture of the paper more with them.

**Which pencil is hardest?** 9H has the hardest graphite lead. The letter "H" is used to indicate the hardness of a pencil's mark. The letter "B" is used to indicate the blackness of a pencil's mark (a darker mark means a softer lead). The Higher the number next to the 'H', harder the pencil lead.

**Is HB or 2B better for drawing?** Artists use HB pencils for general writing and sketching, while 2B pencils are preferred for shading due to their ability to produce darker tones and smoother gradients. For shading purposes, softer pencils like 2B or 4B are often recommended.

**Which is the softest pencil?** The B pencil range: The 9B pencil is the softest, and the B pencil is the hardest.

**What does f mean on a pencil?** The degree of hardness of a pencil is printed on the pencil. H stands for "hard". HB stands for "hard black", which means "medium hard". F stands for "firm".

**What does b mean on a pencil?** The H in pencil grades stands for hardness, and the B stands for blackness. The harder a pencil lead is, the lighter the lines they produce will be. Conversely, softer leads make darker marks, and thus fall into the 'B' side of the HB Graphite Scale.

**What is the #1 pencil?** The higher the number, the harder the core and lighter the markings. (No. 1 pencils produce darker markings, which have been preferred by editors and people working in publishing.) The current style of production is modeled on pencils developed in 1794 by Nicolas-Jacques Conté.

## The Poverty of Historicism: A Critique

*The Poverty of Historicism*, a seminal work by philosopher Karl Popper, challenges the idea that history inevitably follows a predetermined path. Popper argues that attempts to derive universal laws from historical events are doomed to failure, as the future is fundamentally unpredictable.

### What is Historicism?

Historicism is a belief that history unfolds according to predetermined patterns or laws. Proponents of historicism argue that by studying past events, we can identify the forces that drive history and predict future developments.

### Popper's Critique

Popper criticizes historicism on several grounds. First, he argues that it is impossible to formulate universal laws that apply to all of history. Different societies and periods have unique characteristics that make it difficult to generalize across them.

Second, Popper points out that historical events are often unintended consequences of human actions. The course of history is not driven by deterministic forces but by

the unpredictable interactions of individuals and groups.

### **The Poverty of Prediction**

One of the main flaws of historicism, according to Popper, is its inability to make accurate predictions about the future. If history were truly governed by laws, then it should be possible to forecast future events with a high degree of certainty. However, as Popper argues, the future is inherently unpredictable, and any attempt to predict it is doomed to failure.

### **Implications for Social and Political Thought**

Popper's critique of historicism has significant implications for social and political thought. If history cannot be predicted, it follows that there is no such thing as a single "correct" path for society to follow. Instead, societies must constantly adapt and innovate to meet the challenges they face.
