The End of Science: Facing the Limits of Knowledge in the Twilight Scientific Age

By John Horgan

In his provocative book, "The End of Science," John Horgan argues that the era of great scientific discoveries is over. He cites a number of reasons for this, including the increasing complexity of science, the diminishing returns on investment in research, and the rise of scientific skepticism.

Question: What evidence does Horgan provide to support his claim that science is reaching its limits?

Answer: Horgan points to the fact that many of the major scientific breakthroughs of the past few centuries have been made in the relatively "low-hanging fruit" of empirical research. As science becomes more complex, he argues, it will become increasingly difficult to make significant breakthroughs.

Question: What are the implications of the end of science for society?

Answer: Horgan believes that the end of science will have a profound impact on society. He argues that it will lead to a loss of faith in the ability of science to solve our problems and that it will make it more difficult to make informed decisions about complex issues.

Question: Are there any scientists who disagree with Horgan's views?

Answer: Yes, many scientists disagree with Horgan's views. They argue that science is still capable of making significant progress and that the end of science is not imminent. However, they acknowledge that the challenges facing science are becoming increasingly difficult.

Question: What are the alternatives to the end of science?

Answer: Horgan suggests that one alternative to the end of science is a "post-scientific" age in which science will be replaced by other ways of knowing, such as intuition and art. However, he also acknowledges that this is a radical and untested idea.

Question: Is the end of science a good thing or a bad thing?

Answer: Horgan believes that the end of science is both a good thing and a bad thing. He argues that it will be good because it will force us to confront the limits of our knowledge and to find other ways to understand the world around us. However, he also believes that it will be bad because it will make it more difficult to solve some of the world's most pressing problems.
