When driving, you should check your side view mirrors and rear view mirrors and glance frequently as far ahead as possible.? When driving in traffic, glance in mirrors every 5 to 8 seconds. Check your mirrors any time prior to braking or slowing down. Check the mirror and blind spots prior to all turns and lane changes.

When seated properly, the driver should be at least? Adjust your seat height so that your eye level is at least three inches above the steering wheel while still allowing ample space between your head and the roof of the vehicle.

When securing the vehicle, the parking brake should be set before placing the vehicle in park.? Many drivers put their cars in park before setting the emergency brake. That's backwards. The correct way is to stop your car with your primary brakes, set the emergency brake and then place your car in park before turning off your engine.

When should controlled braking be done? Two situations where the quick steering and controlled braking techniques are used are (1) when an on-coming vehicle pulls into your lane, or (2) when a vehicle changes lanes suddenly in front of you, forcing you to maneuver.

How many seconds should you be scanning ahead of your vehicle? To give yourself time to react, avoid last minute moves and hazards, always keep your eyes moving and scan the road at least 10 seconds ahead of your vehicle.

How many seconds should you check your mirrors while driving? You need to scan your mirrors constantly You should scan your mirrors every five to eight

seconds to keep your picture of the road around you updated. Your primary focus will be through the windshield, but quick mirror checks alert you to what might be about to happen from behind.

Is one hand steering acceptable when backing the vehicle? There are only two situations that may require steering with one hand: When you are turning while backing up to see where you are going behind you. Place your hand at the 12 o'clock position on the steering wheel. When you are operating vehicle controls that require you to remove a hand from the steering wheel.

When dealing with a tailgater, it is best to? If you're on a multi-lane road, move over to the right when it's safe, giving the driver a chance to pass you on the left. If you're on a single-lane road, consider pulling into a well-lit parking lot or gas station to let them pass. Stay steady. Speeding up and slowing down can increase your chance of getting hit.

When you brake, the weight of the vehicle is shifted towards the? Braking: When you brake, weight transfers to the front tires, increasing their grip and improving braking performance. However, this also reduces the grip on the rear tires, which can make the car more prone to oversteering. Cornering: When you turn, weight transfers to the outside tires, increasing their grip.

When another vehicle is trying to pass, you do not.? BEING PASSED If another vehicle begins to pass you, stay in your lane and do not increase your speed. If many vehicles are passing you in the right lane of a multi-lane roadway, you are probably going slower than the rest of the traffic.

When parking uphill with a curb, you should? Headed uphill: Turn your front wheels away from the curb (left-towards the center of the road) and let your vehicle roll back a few inches. The wheel should gently touch the curb.

Should the driver's chin be above the steering wheel? When seated properly, the driver's chin should be above the steering wheel.

What is an area that may not be visible to the driver? Blind Spot: the area that is not visible to the driver without turning their head and looking.

When you overtake a vehicle, you should?

Which type of vehicle is harder to control while stopping? Bobtails can be very hard to stop smoothly. It takes them longer to stop than a tractor-semitrailer loaded to maximum gross weight. In any combination rig, allow lots of following distance and look far ahead so you can brake early.

What does SCC stand for in driving? Smart cruise control is an optional cruise control system for road vehicles that automatically adjusts the vehicle speed to maintain a safe distance from vehicles ahead with application of braking or acceleration.

Do you signal or check mirrors first? Use your mirrors – lots Before signalling to see if it's safe to give a signal and to carry out your intended plan, after signalling to see how drivers behind are reacting to your signal and before slowing or turning, just to make sure things are still OK. Always check your mirrors before you: Move off. Give a signal.

How do you remember to check your mirrors when driving? Turning right: Check the interior mirror to see what is behind you before turning, then your right door mirror. You should also check your interior mirror once you have performed the manoeuvre. Slowing down/Stopping: Check your interior mirror to see what is behind you before slowing down or stopping.

In what order do you check your mirrors?

When should you check side mirrors when driving? When you're driving on a piece of straight road this should be around once every 8-12 seconds. You must check your mirrors before braking, turning, reversing , changing lanes or changing position (i.e. moving left or right) within your lane .

How frequently should a driver check his or her side and rearview mirror?

How often should you look glance behind you using your mirrors when driving? Look in your mirror every time you stop or start, pass a car, turn, merge, switch lanes, pull over. Check your rearview mirror every 5-8 seconds. Use your mirrors more often in irregular and high-traffic situations.

When the rearview and outside mirrors should be checked? Conclusion. Checking your mirrors should be part of your visual scan as you travel down the roadway. Even when driving on an open road without changing speed or direction, it's worth still checking your rear and side mirrors just in case an incident is occurring behind you or beside you that you need to react to.
