### Unlock the Secrets of Mental Math Arithmetic

Mental math arithmetic empowers individuals to perform complex calculations quickly and accurately without the aid of a calculator. Here are 70 remarkable secrets that unlock the world of super speed calculation:

- 1. Multiplication by 9:** To multiply any number by 9, simply subtract the number from 100, then place a 0 at the end. For example,  $7 \times 9 = (100 - 7)0 = 93$ .
- 2. Division by Zero:** Divide any number by zero, and the result is infinity or undefined. This is a fundamental rule in mathematics.
- 3. Multiplication by Zero:** Multiplying any number by zero always results in zero. This is because zero represents the absence of quantity.
- 4. Division by One:** Dividing any number by one equals the original number. This is because one represents the whole quantity.
- 5. Multiplication by 11:** To multiply any two-digit number by 11, add the two digits together, place them in the middle, and then keep the outer digits the same. For instance,  $27 \times 11 = 2(2 + 7)7 = 297$ .

These are just a few secrets that can transform your mental math skills. Unlock the power of these techniques and master the art of arithmetic without the need for a calculator.

## **Still the Mind: An Introduction to Meditation (Alan Watts)**

### **What is Meditation?**

According to Alan Watts, meditation is the practice of training the mind to focus and become aware of the present moment. It involves sitting quietly and observing one's thoughts, feelings, and sensations without judgment. This practice aims to calm the habitual chatter of the mind and promote clarity and peace.

### **How to Meditate?**

Watts suggests that beginners start with guided meditations, where they listen to instructions on how to observe their thoughts and sensations. Gradually, as they become more comfortable, they can transition to silent meditation, where they simply sit and focus on the present moment without any external guidance.

### **Benefits of Meditation**

Meditation has been linked to numerous benefits, including reduced stress and anxiety, improved focus and concentration, increased self-awareness, and enhanced creativity. It can also help individuals gain a deeper understanding of their own minds and develop more compassionate perspectives.

### **Overcoming Obstacles**

Watts acknowledges that meditation can be challenging at times, especially when the mind is particularly active. He encourages practitioners to be patient and persistent, recognizing that it takes time to train the mind to focus. He also suggests that distractions can be used as opportunities for meditation, by observing the thoughts and sensations that arise without judgment.

### **Practical Tips**

For those interested in trying meditation, Watts offers practical tips, such as finding a quiet place to sit, setting aside a regular time for practice, and starting with short sessions (e.g., 10-15 minutes). He emphasizes that meditation is not about suppressing thoughts but rather about observing them with a clear and open mind.

By embracing the present moment, individuals can cultivate a deeper sense of
