1. What are the main characteristics of animals? Answer: Animals are multicellular, eukaryotic, heterotrophic organisms with specialized tissues and organs. They can move, sense, and respond to their environment, and have the ability to reproduce.

2. How do animals obtain energy? Answer: Animals typically obtain energy by consuming other organisms, either as predators, herbivores, or parasites. They can also absorb nutrients from their surroundings, such as by filtering water or breaking down organic matter.

3. Discuss the major categories of animals. Answer: Zoology classifies animals into invertebrate and vertebrate groups. Invertebrates, such as insects, worms, and mollusks, lack a backbone. Vertebrates, including fish, amphibians, reptiles, birds, and mammals, have a backbone and a more complex body structure.

4. Explain the importance of evolution in the study of animals. Answer: Evolution is a fundamental principle in understanding the diversity and adaptations of animals. It provides a framework for explaining how different species have originated

and changed over time through natural selection.

5. How do animals interact with their environment? Answer: Animals interact with their environment through a variety of adaptations, such as body coverings, feeding structures, defensive mechanisms, and reproductive strategies. They also form complex relationships with each other, including predator-prey relationships, symbiosis, and social behaviors.
