What is the difference between endocrinology and reproductive endocrinology? An endocrinologist covers a broad range of endocrine disorders like diabetes and bone disease. A reproductive endocrinologist focuses exclusively on those affecting the reproductive system. Because of this, REs are more highly suited to treat the nuances of hormonal imbalances impacting fertility.

What is endocrinology and the reproductive system? The endocrine system, made up of all the body's different hormones, regulates all biological processes in the body from conception through adulthood and into old age, including the development of the brain and nervous system, the growth and function of the reproductive system, as well as the metabolism and blood sugar ...

What is the basic reproductive endocrinology? Clinical reproductive endocrinology includes the study of diseases and secretory status of the endocrine glands involved in reproduction and their secretory products, the reproductive hormones.

What tests will a reproductive endocrinologist do? There are several tests that physicians can use to evaluate the condition of the uterus and the ovaries, such as measuring hormone levels, charting basal body temperatures, viewing ultrasound and X-ray studies, or looking directly into the abdominal cavity with laparoscopy or into the uterus through hysteroscopy.

Why would you see a reproductive endocrinologist? Finally, if you have received a diagnosis that is known to cause infertility, like polycystic ovarian syndrome (PCOS), endometriosis, pelvic inflammatory disease (PID), undescended testicles,

or low sperm count or motility, your best chance of conceiving a child will be in the care of a reproductive endocrinologist.

Do reproductive endocrinologists perform surgery? The reproductive surgeries that REIs are uniquely qualified to perform are surgeries of pathologies affecting the uterus, fallopian tubes, and ovaries. For example, tubal anastomosis is the first-line treatment to restore fertility in women after tubal sterilization.

What are some common hormonal disorders affecting the reproductive system?

What are the most common treatments for reproductive endocrinologists?

Intrauterine insemination (IUI): Purifying one partner's sperm sample and placing it into the other's uterus. In vitro fertilization (IVF): Fertilizing one partner's egg with the other's sperm in a laboratory and then transferring the best embryo(s) to the mother or surrogate's uterus.

Should I see a gynecologist or endocrinologist? Comparing Gynecologists to Endocrinologists Gynecologists treat all aspects of female health and the reproductive system, while endocrinologists treat issues regarding the endocrine system of the human body. Some endocrinologists focus on infertility as it relates to the endocrine system of the body.

What are the 3 main reproductive hormones? The main reproductive hormones estrogen, testosterone, and progesterone are instrumental in sexuality and fertility. They are responsible for pregnancy, puberty, menstruation, menopause, sex drive, sperm production and more. These hormones are produced in the ovaries (in females) and testes (in males).

What is endocrinology test for fertility? Anti-Müllerian hormone (AMH): This hormone is one of the best tests to evaluate ovarian reserve. It is nearly universally tested before starting fertility treatments including assisted conception or IVF.

What will an endocrinologist do on a first visit? The endocrinologist will take a detailed medical history, perform a thorough physical examination, and review any previous test results. This process aids in understanding your overall health status and the nature of your endocrine-related concerns.

When should a woman see an endocrinologist? If your primary healthcare provider suspects your body may be having issues with certain hormones, they may have you see an endocrinologist for a proper diagnosis and treatment plan. An endocrinologist could also be part of a team of healthcare providers to treat certain conditions such as cancers and fertility issues.

What is the difference between an endocrinologist and a reproductive endocrinologist? While a traditional endocrinologist may be an expert on a broad range of endocrine disorders (for example, diabetes), a reproductive endocrinologist focuses exclusively on issues affecting the reproductive system.

What does a reproductive endocrinologist test for? Uterine Fibroids, endometriosis, PCOS, fallopian tube issues, ovarian cysts. Low testosterone, ejaculatory dysfunction, low sperm count, erectile dysfunction, post-vasectomy infertility.

Can men see a reproductive endocrinologist? Most couples seek initial consultation with a reproductive endocrinologist (REI), who performs both the initial male and female evaluations.

What to ask a reproductive endocrinologist?

What is the difference between endocrine and reproductive? The endocrine system controls the glands that control growth, metabolism, sleep, mood, body temperature, and so many other things. The Reproductive system are several organs differing in Males and Females that mature at puberty (thanks to the endocrine system).

Should I see a gynecologist or endocrinologist? Comparing Gynecologists to Endocrinologists Gynecologists treat all aspects of female health and the reproductive system, while endocrinologists treat issues regarding the endocrine system of the human body. Some endocrinologists focus on infertility as it relates to the endocrine system of the body.

Do reproductive endocrinologists perform surgery? The reproductive surgeries that REIs are uniquely qualified to perform are surgeries of pathologies affecting the uterus, fallopian tubes, and ovaries. For example, tubal anastomosis is the first-line

treatment to restore fertility in women after tubal sterilization.

What are the most common treatments for reproductive endocrinologists?

Intrauterine insemination (IUI): Purifying one partner's sperm sample and placing it into the other's uterus. In vitro fertilization (IVF): Fertilizing one partner's egg with the other's sperm in a laboratory and then transferring the best embryo(s) to the mother or surrogate's uterus.
