processes, procedures and activities that organizations must create, implement, maintain and improve in order to successfully manage making products or delivering services.

What ISO is acceptable? The normal ISO range is from 100 up to 1600 – or even higher on some cameras. A high ISO value (e.g. 800, 1600 or higher) means a high sensitivity to light. This helps in low-light situations where you need the camera to capture more light for a better-exposed image.

Why should I use ISO? The ideal ISO number allows your camera to achieve good image quality by letting the right amount of light hit the image sensor. In brighter lighting, lower ISO is best — low ISO values are better in well-lit scenarios. Conversely, when less light is available, you need a higher ISO to compensate.

What is too high of an ISO? Once you've hit 800, you're starting to risk noise entering your picture, so proceed with caution! ISO 1600, ISO 3200, ISO 6400+: This is for pictures in the dusk and evening, where light is imperfect.
