Semester Test Chapters 1 - 5 Continued: Questions and Answers for Name

Question 1: Define a hypothesis and explain its role in scientific investigations.

Answer: A hypothesis is a tentative explanation for a phenomenon that is used to guide scientific investigations. It should be testable, falsifiable, and based on evidence. The hypothesis drives the design of experiments and the collection and analysis of data.

Question 2: Describe the different types of variables in an experiment and explain how they relate to each other.

Answer: There are three main types of variables in an experiment: independent, dependent, and controlled. The independent variable is the factor that is manipulated by the researcher, while the dependent variable is the factor that is measured or observed in response to the manipulation. Controlled variables are kept constant throughout the experiment to eliminate their potential influence on the results.

Question 3: Explain the concept of experimental controls and their importance.

Answer: Experimental controls are procedures used to eliminate or minimize the effects of unwanted variables that could confound the results of an experiment. Controls help to ensure that any changes observed in the dependent variable are due to the manipulation of the independent variable, not to other factors.

Question 4: Describe the different types of scientific graphs and explain their uses.

Answer: The three main types of scientific graphs are line graphs, bar graphs, and scatterplots. Line graphs show the relationship between two variables over time, bar graphs compare different values of a variable, and scatterplots show the relationship between two variables that are not causally related.

Question 5: Explain the importance of replication in scientific research.

Answer: Replication is the process of repeating an experiment to confirm the results. It helps to ensure that the results are not due to chance or other random

factors. Replication also allows researchers to rule out alternative explanations for their findings and to generalize their results to a wider population.
