**How many hours a day should I practice saxophone?** How Long to Practise? If you are at all serious about learning the saxophone, a minimum daily requirement would be 30 minutes practice, but ideally at least an hour. **How many years does it take to get good at saxophone?** How long does it take to learn saxophone? It depends. For most people, it takes around two years to reach a basic level of proficiency.

**How long does it take to get a good tone on saxophone?** Some people sound good on saxophone quickly, within months even. Others still don't sound great after years of practice. If the question is, "how long a person can take to be able to play in a band and improvise?" That could be done within a year with consistent practice (every day is best).

**How do you not run out of breath when playing saxophone?**

**What is the best posture for saxophone?** You want the top of the mouthpiece to come right up to your top teeth. Your fingers are resting lightly on the key pearl, and your wrists are straight. Your shoulders are relaxed and not hunched up. Check that your feet are flat on the floor about hip width apart.

**How can I practice my sax quietly?**

**What is saxophone lung?** "Saxophone lung," a rare type of hypersensitivity pneumonia. "Basically, he was breathing in this fungus and developed an allergic reaction," Shams says. Once the musician started sterilizing his instrument regularly, he improved substantially.

**Should I brush my teeth before playing saxophone?** A lesser-known, but super important tip, is to always brush your teeth before playing the saxophone. This is particularly important if you've been eating or drinking sugary foods and drinks. Sugar and saliva is a nasty combination that can accumulate on your pads and cause them to stick.

**Do you tongue every note on sax?** If you are playing a series of notes you're going to have to choose whether to tongue them or slur them. The word "slur" here refers

to connecting those notes with the air. When slurring, you don't tongue between each note.

**What are the side effects of playing the saxophone?** Couple of studies are stating that more than 50% of the neuromusculoskeletal disorders occur among musicians and are related to playing their instrument. There are evidence confirming this fact. Among another groups of mentioned disorders related to this issue are neurological, dermatological, visual, acoustical areas.

**What muscle is used to play saxophone?** Saxophone embouchure is the position of the facial muscles and shaping of the lips to the mouthpiece when playing a saxophone. Playing technique for the saxophone can derive from an intended style (classical, jazz, rock, funk, etc.) and the player's idealized sound.

**What does playing saxophone do to your face?** Playing a wind instrument can influence tooth position and facial morphology in both children and adults. Aspects that stand out are overjet, arch width, facial divergence/convergence and lip thickness.

**How do I know if my saxophone is good?** Also, weak rods are a sign of an inferior horn. Rods can sometimes be the only way to tell if that shiny new saxophone is made to last! On some horns, the rods will be silver while the body is a gold color. This is generally a sign that the horn is a student model.
