

1 3 7 new strategy for malaria surveillance in elimination

[Download Complete File](#)

1 3 7 Surveillance for Malaria**

1 3 7 surveillance is a malaria surveillance approach that aims to detect, diagnose, and treat malaria cases within 1 day, 3 days, and 7 days, respectively. This rapid response strategy reduces the risk of severe illness and death from malaria.

National Strategic Plan for Malaria Elimination 2017-2022

The National Strategic Plan for Malaria Elimination 2017-2022 is a comprehensive plan developed by the government of a specific country to eliminate malaria within a defined timeframe. The plan outlines strategies, targets, and indicators for achieving malaria elimination.

Surveillance System for Malaria Elimination

A surveillance system for malaria elimination is a mechanism for collecting, analyzing, and disseminating data on malaria cases, transmission patterns, and program effectiveness. The system helps identify areas of high transmission, monitor progress towards elimination, and guide control interventions.

Strategies for Malaria Elimination

Strategies for malaria elimination include:

- Vector control (e.g., mosquito nets, indoor residual spraying)
- Case management (early diagnosis, effective treatment)

- Prevention (e.g., chemoprophylaxis, vaccines)
- Surveillance and response (rapid detection, containment)

1 3 7 Malaria Strategy

The 1 3 7 malaria strategy is a specific surveillance and response approach that aims to detect and treat malaria cases within 1 day, 3 days, and 7 days, respectively. It is particularly effective in areas with high malaria transmission.

1 3 7 Strategy in China

China has implemented a 1 3 7 strategy for malaria elimination since 2013. The strategy has been successful in significantly reducing malaria incidence and moving towards elimination.

National Malaria Elimination Strategic Plan 2017-2021

The National Malaria Elimination Strategic Plan 2017-2021 is a comprehensive plan developed by the government of Thailand to eliminate malaria within a defined timeframe. The plan outlines strategies, targets, and indicators for achieving malaria elimination.

National Malaria Strategic Plan 2017-2020

The National Malaria Strategic Plan 2017-2020 is a similar plan developed by the government of another specific country to eliminate malaria.

National Malaria Elimination Strategy Thailand 2017-2026

The National Malaria Elimination Strategy Thailand 2017-2026 is a comprehensive plan developed by the government of Thailand to eliminate malaria within a defined timeframe. The plan outlines strategies, targets, and indicators for achieving malaria elimination.

Malaria Surveillance App

A malaria surveillance app is a mobile application that allows health workers to collect and report malaria data in real-time. The app can improve data accuracy and timeliness, enabling rapid response and effective intervention.

Current National Malaria Elimination Programme

The Current National Malaria Elimination Programme refers to the ongoing efforts and initiatives undertaken by a specific country to eliminate malaria. The programme may include various strategies and activities to achieve this goal.

Surveillance Methods

Surveillance methods for malaria include:

- Microscopy
- Rapid diagnostic tests
- Molecular diagnostics
- Case reporting
- Active case detection

Current Malaria Control Strategies

Current malaria control strategies include:

- Vector control (e.g., insecticide-treated bed nets, indoor residual spraying)
- Case management (e.g., early diagnosis, effective treatment)
- Prevention (e.g., chemoprophylaxis, vaccines)
- Surveillance and response (e.g., 1 3 7 strategy)

WHO Malaria Elimination Guideline

The WHO Malaria Elimination Guideline provides guidance to countries on how to implement effective malaria elimination programmes. The guideline outlines strategies, tools, and recommendations based on evidence and best practices.

Advances in Malaria Elimination

Advances in malaria elimination include:

- New malaria vaccines

- Improved diagnostic tools
- More effective vector control methods
- Enhanced surveillance and response systems

24 7 Surveillance

24 7 surveillance refers to a surveillance system that operates 24 hours a day, 7 days a week. This continuous surveillance allows for rapid detection and response to health events, including malaria outbreaks.

Parameters of Malaria Surveillance

Parameters of malaria surveillance include:

- Case incidence
- Transmission intensity
- Geographic distribution
- Drug resistance patterns
- Population vulnerability

Level 3 Malaria

Level 3 malaria is a severe form of malaria that can be fatal if not treated promptly. It is characterized by severe anemia, cerebral malaria, or other life-threatening complications.

3 Ts in Malaria

The 3 Ts in malaria refer to:

- Test: Rapid diagnostic tests to confirm malaria infection
- Treat: Effective antimalarial treatment
- Track: Surveillance to monitor transmission and guide interventions
