Structural Analysis: RC Hibbeler 6th Edition Solutions

Question 1: Determine the reactions at the supports of the simply supported beam subjected to a point load.

Answer: The reactions at the supports are:

- At A: $R_A = P/2$
- At B: $R_B = P/2$

Question 2: Calculate the deflection at the center of a cantilever beam subjected to a uniformly distributed load.

Answer: The deflection at the center of the beam is:

- $y = wL^4 / 8EI$

where:

- w is the uniform load per unit length
- L is the length of the beam
- E is the modulus of elasticity
- I is the moment of inertia

Question 3: Determine the bending moment diagram for a fixed-end beam subjected to a triangular load.

Answer: The bending moment diagram is a parabola with a maximum at the center of the beam and zero at the supports. The maximum bending moment is:

- $M = wL^2 / 8$

Question 4: Calculate the shear force diagram for a simply supported truss subjected to a concentrated load at a joint.

Answer: The shear force diagram is a triangle with zero shear at the supports and a maximum at the point of the concentrated load. The maximum shear force is equal to the concentrated load.

Question 5: Determine the axial forces in the members of a plane truss subjected to external loads.

Answer: The axial forces in the members can be determined using the method of sections or the method of joints. The method of joints involves cutting the truss at a joint and analyzing the forces acting on the cut members.
