**What are the three key elements of John Adair's leadership model?** The Action Centred Leadership model is Adair's best-known work, in which the three elements - Achieving the Task, Developing the Team and Developing Individuals - are mutually dependent, as well as being separately essential to the overall leadership role.

**What is the functional leadership model of Adair?** Adair's model encourages leaders to clearly define the project's goals, set milestones, and distribute responsibilities. This aids in maintaining a clear direction and ensures that everyone in the team understands their roles and contributions to the overall project.

**What is the Adair's theory of team development?** Adair's theory is more practical and shows that leadership can be taught and that it is a transferable skill. The task needs a team because one person alone cannot accomplish it. If the team needs are not met the task will suffer and the individuals will not be satisfied.

**What are the 3 C's of leadership?** As leaders, we should create an atmosphere of consistent excellence. The next time you are leading your team, focus on your mindset and decide to be a three-C leader: competent, committed and with strong character. When we do that, our employees win, and when they win, we all win.

**What are the three aspects of teamwork identified by John Adair's action Centred leadership?** Action Centered Leadership is a simple model that can help you to keep the three key areas of responsibility – task, team and individual – in balance. The model is applied in three stages: Develop the core skills necessary for your level of leadership.

**What is Adair's strategy known as needs creating standards maintaining discipline and selecting sub leaders?** Explanation: According to Adair's approach, Needs, setting standards and maintaining discipline, and appointing sub-leaders is called as Team functions.

**What best describes functional leadership?** The Functional theory of leadership emphasizes how an organization or task is being led rather than who has been formally assigned a leadership role. In the functional leadership model, leadership does not rest with one person but rests on a set of behaviors by the group that gets things done.
