The Eastern Schism: A Study of the Papacy and the Eastern Churches

Question 1: What is the Eastern Schism?

Answer: The Eastern Schism refers to the division between the Eastern Orthodox Church and the Western Catholic Church that occurred in the 11th and 12th

centuries. It resulted in the establishment of separate ecclesiastical structures, with each side claiming authority over the other.

Question 2: What were the key events that led to the schism?

Answer: The schism was precipitated by a series of disputes and power struggles, including the issue of papal supremacy. The Western Church claimed authority over the Eastern churches, while the latter resisted this claim, emphasizing their autonomy. Excommunications and retaliatory measures further exacerbated tensions.

Question 3: What were the theological differences that contributed to the schism?

Answer: In addition to the jurisdictional issues, there were also theological disagreements between the two sides. The Eastern churches rejected the Western doctrine of the filioque (the Holy Spirit proceeds from both the Father and the Son), while the West rejected Eastern practices such as clerical marriage.

Question 4: What were the consequences of the Eastern Schism?

Answer: The schism had lasting consequences for the Christian world. It led to centuries of estrangement between the two branches of Christianity, and it hindered efforts for reunification. The schism also had political implications, with the Eastern Orthodox Church aligning with the Byzantine Empire and the Western Catholic Church aligning with the Holy Roman Empire.

Question 5: Have there been any efforts to bridge the gap and resolve the schism?

Answer: Over the centuries, there have been periods of rapprochement and dialogue between the Eastern Orthodox and Catholic churches. However, full reunification has remained elusive, as the underlying theological and jurisdictional differences continue to be significant obstacles.

Turkle: Life on the Screen, Chapter 10: Identity Crisis

Question: Turkle argues that the internet has created a new kind of identity crisis. What is this crisis, and how is it different from previous identity crises?

Answer: Turkle argues that the internet has created a new kind of identity crisis because it allows people to create multiple online personas that are often very different from their offline selves. This can lead to a sense of fragmentation and confusion about who one really is. In the past, people's identities were largely defined by their physical presence and their interactions with others in the real world. However, the internet allows people to create online identities that are not tied to their physical selves. This can lead to a sense of freedom and anonymity, but it can also lead to a sense of disconnection and alienation.

Question: How does Turkle believe that the internet affects our sense of self?

Answer: Turkle believes that the internet can have a profound impact on our sense of self. She argues that the internet can lead to a sense of fragmentation and confusion about who one really is. This is because the internet allows people to create multiple online personas that are often very different from their offline selves. This can lead to a sense of disconnection and alienation from one's true self.

Question: What are some of the ways that people use the internet to create new identities?

Answer: People use the internet to create new identities in a variety of ways. Some people create online avatars that are very different from their offline selves. Others use social media to present a curated version of themselves that is not entirely accurate. Still others use the internet to explore different aspects of their personality that they would not be able to express in the real world.

Question: What are some of the potential risks of creating new identities online?

Answer: There are a number of potential risks associated with creating new identities online. One risk is that people may become so invested in their online identities that they neglect their offline relationships. Another risk is that people may be exposed to online harassment or abuse. Additionally, people may find it difficult to maintain multiple identities without becoming confused or overwhelmed.

Question: What does Turkle suggest that we can do to mitigate the risks of identity crisis in the digital age?

Answer: Turkle suggests that we can mitigate the risks of identity crisis in the digital age by being mindful of the ways that the internet can affect our sense of self. She also suggests that we should be careful not to become too invested in our online identities and that we should maintain strong offline relationships. Additionally, she suggests that we should be aware of the potential risks of online harassment and abuse.
