### SQL Practice Problems with Solutions: Enhance Your Skills

SQL (Structured Query Language) is a powerful tool for data manipulation and retrieval, widely used in database management systems. To master SQL, it's essential to practice solving problems to improve your understanding and proficiency. Here are five practice problems with detailed solutions:

#### Question 1:

Retrieve the names of all customers who ordered products from a specific category, 'Electronics'.

```
SELECT customer_name
FROM orders
JOIN products ON orders.product_id = products.product_id
WHERE products.category = 'Electronics';
```

#### Answer:

This query uses a JOIN to link the 'orders' and 'products' tables and filter the results based on the 'Electronics' category.

#### Question 2:

Find the total number of products that have been sold.

```
SELECT SUM(quantity)
FROM order_items;
```

**Answer:**

This query aggregates the 'quantity' column, which represents the number of units sold for each order item, to calculate the total number of products sold.

**Question 3:**

Retrieve the names of employees who work in the 'Sales' department and have earned a salary above \$50,000.

```
SELECT employee_name
FROM employees
WHERE department = 'Sales' AND salary > 50000;
```

**Answer:**

This query filters the 'employees' table by department and salary to identify employees who meet the specified criteria.

**Question 4:**

Update product prices by increasing them by 5%.

```
UPDATE products
SET price = price * 1.05
WHERE price IS NOT NULL;
```

**Answer:**

This query increases product prices by multiplying their original values by 1.05.

**Question 5:**

Write a subquery to find the top three best-selling products.

```
SELECT product_name
FROM products
WHERE product_id IN (
    SELECT product_id
    FROM order_items
    GROUP BY product_id
```

---

```
ORDER BY SUM(quantity) DESC
LIMIT 3
);
```

**Answer:**

This query uses a subquery to identify the product IDs of the top three best-selling products, which are then used to retrieve the corresponding product names from the 'products' table.

### **Wiring Diagram of Ignition System in 3K, 4K, and 5K Engines**

**Question:** Can you provide a comprehensive overview of the wiring diagram for the ignition system in 3K, 4K, and 5K engines?

**Answer:** The ignition system in 3K, 4K, and 5K engines consists of several key components and electrical connections. The main components include the ignition coil, distributor, spark plugs, and wiring harness. The wiring diagram outlines the electrical connections between these components and ensures proper functionality.

**Question:** What is the function of the ignition coil in the ignition system?

**Answer:** The ignition coil is responsible for generating high-voltage electrical impulses that create sparks at the spark plugs. It receives electrical power from the battery and converts it into the necessary voltage to ignite the air-fuel mixture in the combustion chamber.

**Question:** How does the distributor contribute to the ignition system?

**Answer:** The distributor distributes the high-voltage electrical impulses generated by the ignition coil to the spark plugs in the correct firing order. It also determines the timing of the ignition spark, ensuring that the air-fuel mixture is ignited at the optimal moment for efficient combustion.

**Question:** What is the role of spark plugs in the ignition system?

**Answer:** Spark plugs are responsible for creating the electrical spark that ignites the air-fuel mixture in the combustion chamber. They consist of a central electrode and a ground electrode that are connected to the ignition system. When the high-voltage electrical impulse reaches the spark plugs, it creates an electrical arc across the electrodes, generating the necessary spark for ignition.

**Question:** How is the wiring harness connected to the ignition system components?

**Answer:** The wiring harness serves as the electrical pathway that connects all the ignition system components, including the ignition coil, distributor, spark plugs, and battery. It ensures the proper flow of electrical current and communication between these components, enabling the ignition system to function effectively.
