What technique is used in a microbiology lab? In the microbiology lab we use aseptic technique to: Prevent contamination of the specific microorganism we are working with. Prevent contamination of the room and personnel with the microorganism we are working with.

What is error in microbiology? Errors in microbiology laboratory may occur in the pre-analytical, analytical and post analytical stage. Pre-analytical errors may occur from specimen collection, improper labeling or during improper transportation.

What are the most common microbiology tests?

What are the common bacteria used in microbiology lab? In that case, the commonly used ones are *Bacillus subtilis* (Gm +ve), *Escherichia coli* (Gm -ve). Some also use non-pathogenic strains of *Klebsiella*, *Pseudomonas* and *Mycobacterium smegmatis*.

What are the 5 bacteria names in microbiology? Bacteria are classified into five groups according to their basic shapes: spherical (cocci), rod (bacilli), spiral (spirilla), comma (vibrios) or corkscrew (spirochaetes). They can exist as single cells, in pairs, chains or clusters. Bacteria are found in every habitat on Earth: soil, rock, oceans and even arctic snow.
