

Biotechnology and biology of trichoderma

by vijai g gupta

[Download Complete File](#)

What are the biotechnology and environmental applications of Trichoderma spp? Many Trichoderma species act as biological control agents and plant growth promoters. Additionally, the genus Trichoderma is a new fungal source for the production of cyclosporin A as well as various hydrolytic enzymes with industrial importance.

Is Trichoderma harmful to humans? Trichoderma longibrachiatum is the main human pathogen species within the genus and has been isolated with increasing frequency in recent years. It produces toxic peptides called trilongins. Exposure to T. longibrachiatum cannot be treated with antimicrobial agents and dramatically weakens the immune system.

Which disease is caused by Trichoderma? Trichoderma species are mainly responsible for continuous ambulatory peritoneal dialysis–associated peritonitis (7 cases) and invasive infections in immunocompromised patients (9 cases) with a hematologic malignancy or solid-organ transplant.
