### **Tube Feeding Troubleshooting Guidelines**

**Question 1: The feeding bag is empty, but the patient's stomach is not full.**

- **Answer:** Check the feeding pump for proper function. Ensure the tubing is not kinked or obstructed. Auscultate the patient's abdomen for the sound of the feeding entering the stomach.

**Question 2: The patient is aspirating formula.**

---

- **Answer:** Elevate the patient's head and chest during and after feeding. Monitor the patient for signs of aspiration, such as coughing, choking, or hypoxia. If aspiration occurs, stop the feeding and consult a healthcare professional.

**Question 3: The patient is experiencing abdominal discomfort or diarrhea.**

- **Answer:** Check the formula for expiration and proper refrigeration. Try a different formula or adjust the feeding rate gradually. Avoid feeding large meals at once. Monitor the patient for abdominal distention, pain, or other symptoms of gastrointestinal distress.

**Question 4: The patient is pulling out the feeding tube.**

- **Answer:** Secure the tube properly using a stabilization device. Check the tube for comfort and ensure it is not causing any irritation. Consider using a tube holder or a vest to keep the tube in place.

**Question 5: The patient is refusing the feeding.**

- **Answer:** Assess the patient's preferences and offer a choice of flavors or textures. Provide a distraction-free environment during feeding. Try administering the feeding through different routes, such as a pump or syringe. Consult with a speech therapist or dietitian for support and recommendations.
