### **How can I get over my fear of flying?**

**Is my fear of flying irrational?** “Fear of flying is an irrational fear that the plane is a dangerous environment that needs to be avoided,” explains chartered psychologist Dr. Mark Rackley. “The person with this phobia generalizes that all planes are dangerous, and so creates an association in their brain between flying and a threat to life.”

**Why am I suddenly scared of flying?** This type of fear can also be linked to post-traumatic stress disorder (PTSD), where the individual re-experiences the traumatic event and associates flying with those negative feelings. Another cause can be the development of generalised anxiety.

**What is the fear of flying called?** Fear of flying is called aviophobia or aerophobia. Fear of getting on a plane can be a heritage from childhood or it can emerge from adulthood as a result of various triggering factors. According to researches, air travel is the least likely form of transportation with a risk of death.

**Is flying safe if I'm scared?** Air-traffic burnout aside, the numbers on plane crashes are actually somewhat reassuring — every few years some new study finds that air travel is safer than it's ever been, and one Harvard paper found that the odds of actually being involved in a plane crash are one in 1.2 million.

**What is the best therapy for fear of flying?** Exposure therapy: This type of therapy gradually exposes you to places, thoughts or situations that relate to air travel. You may visit an airport and watch planes arrive and depart. Virtual reality tools, such as computer simulations of flights, can also help you overcome your fear of flying.

**What is the best sedative for fear of flying?** These drugs are usually taken shortly before a flight. They include: Anti-anxiety medication, such as diazepam (Valium) or alprazolam (Xanax). Motion sickness medication, such as dimenhydrinate (Dramamine).

**What is the root cause of fear of flying?** The fear of flying is a learned fear and therefore it can be unlearned. It takes time and effort but it can be done. The most common cause of a fear of flying is what some passengers would call a 'bad flight' experience, and it's most likely to be turbulence or taking off although there are other reasons.

**Why am I scared my plane will crash?** "Some people are afraid that they'll literally crash and die. Others are frightened mainly by the bodily sensations they associate with flying, such as shallow breathing, a racing heartbeat, or feelings of unreality and disorientation."

**What medication is used for travel anxiety?** People often come to us requesting the doctor or nurse to prescribe diazepam for fear of flying or assist with sleep during flights. Diazepam is a sedative, which means it makes you sleepy and more relaxed.

**Can you fly if you have anxiety?** In fact, an estimated one in three people experience some level of anxiety when it comes to flying. The good news is that there are practical and effective ways to manage your anxiety so you can fly with more confidence and ease. If in doubt, try our Calming Flight Anxiety meditation series.

**How safe is flying really?** Arnold Barnett, a statistician at the Massachusetts Institute of Technology who has studied airline safety, tells NPR that from 2018 to 2022, the chances of a passenger being killed on a flight anywhere in the world was 1 in 13.4 million. Between 1968 to 1977, the chance was 1 in 350,000.

**How can I calm my fear of flying?**

**What percentage of Americans are afraid to fly?** But reassuring statistics like that often are not enough to quell the anxiety many Americans have when flying. According to a commonly cited study from Frontiers in Psychology, up to 40% of Americans have some fear of flying.

---

**How common is flying anxiety?** Fear of flying is quite common. About one in six people have a significant fear that prevents them from flying, and about one in five regular flyers use alcohol or prescription drugs to 'help' them through a flight.

**How to not be scared of plane takeoff?**

**Why is flying so scary to me?** There is good empirical evidence that people who end up developing a fear of flying, most of them have had some type of stressful life experiences. That could mean that they had air travel stress. They may have experienced trauma in their lives. They may have a history of panic attacks.

**Can turbulence bring down a plane?** Aircraft are designed to take the worst that turbulence can throw at them, says Mr Gratton, associate professor of aviation and the environment at Cranfield University. It's "unlikely" turbulence will ever destroy an aircraft, he adds.

**How do I stop worrying about my flight?** Breathing and Relaxation Techniques  
Practice deep breathing and relaxation exercises to manage anxiety symptoms. Focus on slow, deep breaths to calm your nervous system. Meditation and mindfulness techniques can also be beneficial in centering your thoughts and reducing anxious feelings.
