**What is the difference between T5 T8 and T12 fluorescent lights?** T5 lights are the most energy-efficient and ideal for spaces where energy savings are a priority, while T8 lights strike a balance between efficiency and brightness, making them suitable for general lighting. T12 lights, while less efficient, may still be found in certain settings.

**What is the difference between T5 and T8 LED tubes?** Both T5 and T8 lights refer to a specific measurement and size of a tubular-shaped LED lighting option. The main difference between T5 and T8 bulbs refers to the diameter. A T5 LED bulb will have a diameter of 5/8 inches, while a T8 tube will reach a diameter of 1 inch.

**Can you replace T12 fluorescent tubes with T8 LED?** T8 will have one-inch diameter, the T5 will have a 5/8 diameter, and a T12 will have 12/8 inch or 1.5 inch diameter. If T8 and T12 have the same bi-pin base, then you can use the bulbs interchangeably using the same fixture just as long as you check the milliamp requirements for the ballast.

**What is the difference between T12 LED and T12 fluorescent bulbs?** LED lighting: The typical T12 four-lamp fixture uses 172 watts of power between the lamps and ballast. LED equivalents typically use only 50 watts, 71% less energy per fixture! Not only are they brighter per watt, but they also last longer than even the preferred fluorescent bulbs.

**Can you replace fluorescent tubes with LED?** In general, you can replace fluorescent tubes with LEDs anywhere, as long as you pay attention to the right replacement. Because from the external appearance, the two light sources are very similar. You can find mechanically suitable LED tube for all types of fluorescent

tubes.

**Are T12 bulbs being phased out?** Why are my light bulbs phased out? In July 2012, the U.S. Department of Energy's lighting mandate took effect. Fluorescent T12 lamps and ballasts were phased out and are no longer legal to be produced or imported. This mandate was passed due to federal energy efficiency regulations.

**Are T5 fluorescent tubes being phased out?** From 1st September 2023, T5 and T8 fluorescent tubes will be phased out altogether. All business owners are required to source alternative lighting solutions and discard them as hazardous waste, or through structured recycling to be compliant.

**Do you need a ballast for LED tubes?** No LED bulbs require a ballast, although some are engineered to work with an existing ballast. You will find ballast-compatible or "plug-and-play" LEDs that are designed to replace linear fluorescents, compact fluorescents, or HIDs. Incandescent and halogen lamps do not require a ballast.

**Are T5 and T8 banned?** In 2023, T5 and T8 fluorescent and compact fluorescent lamps (CFLs) were phased out in accordance with the European Commission's Ecodesign and RoHS Directives. The reason is to remove the most energy- and resource-demanding products from the market and the use of environmentally hazardous mercury.

**What happens if I put a T12 bulb in a T8 fixture?** T12 light bulbs can be easily retrofitted to T8 light bulbs which are smaller, use less energy, and have less mercury in them than T12 bulbs. The other alternative, not as easily retrofitted, are LED bulbs that have no mercury in them at all.

**How do I know if my ballast is compatible with LED?** LED Tube and Ballast Compatibility The tube diameter, package description and the product code (PC) on a ballast can all be used to determine the type of lamp it is compatible with.

**How to eliminate ballast for LED bulbs?**

**How do you convert a T12 fluorescent bulb to LED?** For the easiest and quickest T12 to LED upgrade, the Philips UniversalFit tubes are probably your best bet. These plug right in and work off the existing ballast. When the ballast gives out, swap it for a newer electronic ballast, and the tubes will continue to light your space.

**How to tell if you have a T8 or T12 ballast?** What is the difference between a T8 ballast and a T12 ballast? The difference between T8 and T12 lights is in the size of the tubes. The T12 tubes are 1.5 inches in diameter and the T8 tubes are just one inch in diameter. Other than this, there is no difference in the design, including in the ballast.

**Is cool daylight white?** Is Cool White the same as Daylight? No, Daylight is generally brighter than Cool White. However, at the brightest end of the Cool White colour temperature range, it will still be very bright. If you were to go beyond Daylight you will start to find Blue Light colour temperatures bringing a cool, clean feel.

**Will a T8 work in a T12 fixture?** Electrical compatibility is a bit trickier, because T12 fixtures will almost always contain a T12 ballast, which is not compatible with T8 lamps.

**Can I replace a T5 bulb with a T8?** T8 bulbs come in standard 2-, 3-, 4- and 5-foot lengths. Comparable T5 bulbs are slightly shorter than T8 bulbs. Make sure you check your existing fixture carefully because the two types of bulbs are not interchangeable.

**How to tell if ballast is T8 or T12?** T8 = 1-inch diameter. T12 = 1-1/2-inch diameter.

**Can you use a T8 LED bulb without a ballast?** Most T8 LED tubes do not need a ballast. So, if you are going to install a T8 LED tube light, it will require a ballast bypass unless you choose a ballast compatible T8 LED tube.
