**How do you get all the answers right on a multiple choice test?**

**How do you find the answers to multiple choice questions?**

**What is the best answer to guess on a multiple choice test?** Most people (and tutors) tell students that, if they have no idea on a question, to just guess answer choice “C” — the middle answer on most multiple choice tests.

**What percent of multiple choice answers are C?**

**Is C the most common answer?** I'm sure you've heard this at some point “if you don't know the answer, always guess C. because it's the most common correct

option". That's just a myth, and generally there are no most common answers on multiple choice tests.

### **How to outsmart a multiple choice test?**

**How to answer multiple choice questions if you don't know the answer?** - If you aren't sure of the correct answer: - Eliminate alternatives that are absurd, silly, or obviously incorrect. - Cross off answers that are clearly not correct. - Make sure the stem and the choice you've chosen agree grammatically. - Choose the alternative that is most inclusive.

### **Where can I get test answers?**

**How to memorize multiple choice answers?** Study regularly leading up to the exam, and try to organize your notes in a way that makes them easier to remember. Making flash cards, using mnemonic devices such as acronyms, drawing concept maps, or whatever suits your learning style and can help you learn more efficiently.

**Should I guess b or c?** The truth is that it doesn't matter which letter you pick, only that you stick to the one you choose. The best strategy, and the one that will maximize your overall point gain, is to pick your favorite letter and fill it in for every blind guess.

**Is there a pattern to multiple choice tests?** Although test makers try to put the correct answers in random order, they fall into patterns. You can use that to get an edge when you have to guess a tough question. Ideally the items on such a test should stand a 50-50 chance of being true. Actually, true answers are rather more common.

**What letter is most likely to be the answer on a test?** C or H are right (and wrong) as often as any other answer choice. The only guess letter you don't want to use when you are completely guessing is E or K because they only show up on the math test. Ok, myths exposed, let's move on to how and when to guess.

**Should I guess ABC or D?** Whether that letter is A, B, C, or D doesn't matter—just be sure to stick with it every single time.

**Is it better to guess on ACT or leave blank?** 5 Guessing Strategies. Because the ACT has no penalty for guessing, you should always guess on the ACT if you don't know the answer. After all, leaving a question blank and guessing are functionally the same.

**What is the probability of passing a multiple choice test?** Multiple choice Exam with 180 questions, five possible answers to each question, minimum pass rate is 60%.

**How to do well on a multiple choice test?**

**How long should you spend on a multiple choice question?** Instructional Technology Services recommends the following: Multiple Choice questions - 1 minute to 1 ½ minutes per question.

**Is your first answer always right?** If you revise your first-instinct response and find out that the first response was correct, you experience regret and you can anticipate this regret. If you stick with your first response and an alternative turns out to be correct, there is also foreseeable regret, but it is weaker and more likely to fade with time.

**What should you not do when taking a multiple choice test?** Misreading the Question The single most frequent error students make in a multiple choice examination is to misread, and therefore misinterpret the questions. Many students read the possible answers to the question before they have checked to insure that they understand the question.

**How to pass a multiple choice test by guessing?** When numerical options vary greatly, chances are that the best response is in the middle ranges. Eliminate the highest and lowest options. Certain questions have answers that are closely related or almost identical, except for one detail. This should be your clue to choose one of the two similar answers.

**How do you detect cheating in multiple choice?** A statistical procedure compares answers for pairs of students using those items on which both made errors. If the number of identical wrong answers is sufficiently greater than the number expected by chance and if the students were seated close together, then cheating is likely.
