Sivasankar's Engineering Chemistry, renowned for its clarity and depth, is an indispensable resource for students pursuing engineering and allied disciplines. To enhance their understanding, students can now download the book online and access valuable question-and-answer sets that cover the entire syllabus.

Question 1: Explain the concept of electronegativity.

Answer: Electronegativity measures the ability of an atom to attract electrons towards itself. It is influenced by the atomic number (number of protons) and the number of electron shells surrounding the nucleus. The higher the electronegativity, the greater the ability to attract electrons.

Question 2: What is the difference between bond order and bond length?

Answer: Bond order represents the number of covalent bonds between two atoms, while bond length refers to the distance between the nuclei of the bonded atoms. Generally, stronger bonds have a higher bond order and shorter bond length.

Question 3: Describe the principles of coordination chemistry.

Answer: Coordination chemistry involves the formation of metal complexes, which are compounds that contain a metal center surrounded by ligands (atoms, ions, or molecules). The stability and properties of metal complexes are determined by the nature of the ligands and the coordination geometry.

Question 4: Explain the mechanism of corrosion and its prevention.

Answer: Corrosion is the deterioration of metals due to their reaction with oxygen and moisture. It involves an electrochemical process that creates a galvanic cell. Prevention methods include the use of corrosion-resistant materials, coatings, and electrochemical techniques like cathodic protection.

Question 5: Discuss the significance of nanomaterials in engineering.

Answer: Nanomaterials are structures with at least one dimension in the nanometer range. They exhibit unique properties that differ from their bulk counterparts.
