**What are the 5 basic functions of Excel?**

**How to VLOOKUP in Excel?** Use the VLOOKUP function to look up a value in a table. For example: `=VLOOKUP(A2,A10:C20,2,TRUE)`  
`=VLOOKUP("Fontana",B2:E7,2,FALSE)`

**How do I prepare for an Excel interview?**

**How many rows and columns are in Excel?**

## **How to freeze rows in Excel?**

**What are pivot tables in Excel?** A PivotTable is a powerful tool to calculate, summarize, and analyze data that lets you see comparisons, patterns, and trends in your data. PivotTables work a little bit differently depending on what platform you are using to run Excel.

**How to explain Excel skills in an interview?** When asked general questions about Excel, mention popular Excel features such as pivot tables, vlookups, macros, and text functions. Support your answers with real-life experiences where you applied your knowledge of Excel to solve problems and achieve results in your previous positions.

## **What are Excel basic questions?**

## **How to find duplicates in Excel?**

**What does '\$' mean in Excel formula?** The dollar sign in an Excel cell reference affects just one thing - it instructs Excel how to treat the reference when the formula is moved or copied to other cells. **How to merge cells in Excel?** Select the first cell and press Shift while you select the last cell in the range you want to merge. Important: Make sure only one of the cells in the range has data. Select Home > Merge & Center. If Merge & Center is dimmed, make sure you're not editing a cell or the cells you want to merge aren't inside a table.

**How to calculate cells in Excel?** In a worksheet, tap the first empty cell after a range of cells that has numbers, or tap and drag to select the range of cells you want to calculate. Tap AutoSum. Tap Sum. Tap the check mark.

**What is VLOOKUP in Excel?** VLOOKUP is a function that makes Excel search for a certain value in a column (the so called 'table array'), in order to return a value from a different column in the same row. VLOOKUP is an abbreviation for 'Vertical Lookup'.

**How many cells are in Excel?** Excel has 1048576 rows and 16384 columns, for a total of 17,179,869,184 cells. Making the assumption that each language needs a similar number of characters, one worksheet could hold 178 million different translations of the bible.

**How to read VLOOKUP formula?**

**What are the 3 rules for VLOOKUP?** The VLOOKUP function consists of three required arguments, in the following order: lookup value, table array, and column index number. The lookup value is the value for which you want to find matching data and must appear in the first column of the lookup table; it can be a value, a text string, or a cell reference.

**How to use countif?**

**What does spill mean in Excel?** Spill means that a formula has resulted in multiple values, and those values have been placed in the neighboring cells.

Try some simple formulas to add, subtract, multiply, or divide your numbers. Pick a cell, and then type an equal sign (=). That tells Excel that this cell will contain a formula.

**What is a cell in Excel?** Cells are the boxes you see in the grid of an Excel worksheet, like this one. Each cell is identified on a worksheet by its reference, the column letter and row number that intersect at the cell's location. This cell is in column D and row 5, so it is cell D5. The column always comes first in a cell reference.
