The AGV: A New and Revolutionary Very High-Speed Train

What is the AGV?

The AGV (Automotrice Grande Vitesse), developed by French manufacturer Alstom, is a high-speed train designed to operate at speeds up to 360 kilometers per hour (224 miles per hour). Its innovative design and advanced technology set it apart from other high-speed rail systems.

How is the AGV Different from Other Trains?

The AGV incorporates several unique features that enhance its speed and efficiency. These include:

- **Distributed power:** The AGV's power is distributed throughout the train, eliminating the need for a dedicated locomotive.
- **Articulated carriages:** The train's carriages are permanently connected, resulting in reduced weight and aerodynamic drag.
- **Sloping front:** The AGV features a sleek, aerodynamic front that reduces airflow resistance.

What are the Benefits of the AGV?

The AGV offers numerous advantages over traditional high-speed trains. Its high speed and distributed power enable it to accelerate and decelerate rapidly, reducing journey times. The articulated carriages and sloping front contribute to improved energy efficiency and reduced maintenance costs.

Where is the AGV Currently Operating?

The AGV is currently in operation in several countries, including France, Italy, Spain, and Switzerland. It has been praised for its speed, reliability, and comfort, making it a popular choice for intercity and international travel.

What is the Future of the AGV?

Alstom is continually developing and refining the AGV design. The next-generation AGV, known as the "AGV-2", is expected to reach speeds of up to 400 kilometers per hour (249 miles per hour), further pushing the boundaries of very high-speed rail travel.
