**How many cabin crew does a 787 have?**

**What is the highest a 787 can fly?** The Boeing 787 Dreamliner, a more recent addition to the commercial fleet, is able to fly at an altitude of up to 43,000 feet (13,106 meters).

**What is a mel in aviation?** Definitions. A minimum equipment list (MEL) is a list which provides for the operation of aircraft, subject to specified conditions, with particular equipment inoperative (which is) prepared by an operator in conformity with, or more restrictive than, the MMEL established for the aircraft type.

**Is a poh a flight manual?** The POH for most light aircraft built after 1975 is also designated as the FAA-approved flight manual.

**Do pilots use rudder while flying?** The rudder is one of the airplane's three primary flight controls. For a quick review, movement around each of the three axes of flight has a name, and each type of movement is controlled by its own control surface.

**Can you fly without the poh?** As noted, on an airplane without an AFM (Approved Flight Manual) the POH does not need to be on-board, only a placard with the operating limitations. The cutoff for the AFM requirement are individual aircraft that had their first flight after 1 March 1979.

**Does the poh expire?** Generic books are not an acceptable replacement to the aircraft specific POH, which must include the tail number of the airplane to be flown. This document does not expire. In terms of FAA issued documentation, both the airworthiness certificate and the registration certificate must be carried onboard at all times.

**What is the FCOM manual?** The Flight Crew Operating Manual (FCOM) is issued by Airbus Helicopters as a guideline for operators to develop their own Standard Operating Procedures, in accordance with applicable requirements.

**What is the difference between a POH and AFM?** The POH is for a type of aircraft, while the AFM is for one specific airframe. The AFM is generally a copy of that type's POH. However, it'll have the specific serial number listed and contain the weight and balance, equipment list, and operating limitations for that specific airframe.

**How is flight attendant training?** Trainees learn emergency procedures such as evacuating aircraft, operating emergency equipment, and administering first aid. They also receive specific instruction on flight regulations, company operations, and job duties. Toward the end of the training, students go on practice flights.

you are not able to fly regularly.

**What are the different types of manuals in aviation?** Flight Crew Operating Manual: Also referred to as Aircraft Operating Manual (AOM), Aircraft Operating Instructions (AOI) or, more simply, Pilot's Manual.

**How much of a flight is manual?** On average, a very, very small percentage. I'd say that most pilots will takeoff (ALL takeoffs are flown manually) and fly through 5–10,000', then engage the autopilot. Then, they will kick off the autopilot for landing around 1,000' above the ground. There is simply no point in flying manually for much more than that.

**What is a flight operations manual?** The flight operations manual is a collection of documents that contains all of the information that aircraft operators need to fly their aircraft and run their operations. All operators should maintain an up-to-date and accurate operations manual.

**What is manual flight control?** A manual flight control system uses a collection of mechanical parts such as pushrods, tension cables, pulleys, counterweights, and sometimes chains to transmit the forces applied to the cockpit controls directly to the control surfaces.

**Can you fly without the POH?** As noted, on an airplane without an AFM (Approved Flight Manual) the POH does not need to be on-board, only a placard with the operating limitations. The cutoff for the AFM requirement are individual aircraft that had their first flight after 1 March 1979.

**Is the AFM required in aircraft?** The AFM is a vital part of the aircraft inventory and must be carried on all flights unless the National Airworthiness Authority (National Aviation Authority (NAA)) of the aircraft operator has formally accepted that the Operations Manual of the aircraft operator replicates all relevant AFM information for

an aircraft.

**What is a mel in aviation?** Definitions. A minimum equipment list (MEL) is a list which provides for the operation of aircraft, subject to specified conditions, with particular equipment inoperative (which is) prepared by an operator in conformity with, or more restrictive than, the MMEL established for the aircraft type.
