What are the 4 rules of topographic maps?

What does a topographic map show? Topographic maps usually portray both natural and manmade features. They show and name works of nature including mountains, valleys, plains, lakes, rivers, and vegetation. They also identify the principal works of man, such as roads, boundaries, transmission lines, and major buildings.

What is the most commonly used topographic map? USGS topographic maps come in a variety of scales. The most popular and the most detailed are the 7.5-minute or 1:24,000-scale (1 inch = 2,000 feet) quadrangle series.

How do you read contour lines on a map? Each contour line on a topographic map represents a ground elevation or vertical distance above a reference point such

as sea level. A contour line is level with respect to the earth's surface just like the top of a building foundation. All points along any one contour line are at the same elevation.

What are 3 basic characteristics of topographic maps?

What are the 3 types of scales on a topographic map? Generally, scale is a form of size. Map or cartographic scale is the ratio of a distance on Earth compared to the same distance on a map. There are three types of scales commonly used on maps: written or verbal scale, a graphic scale, or a fractional scale.

What are four main uses of topographic maps? Topographic maps have many multiple uses in the present day: any type of geographic planning or large-scale architecture; Earth sciences and many other geographic disciplines; mining and other Earth-based endeavours; civil engineering and recreational uses such as hiking and orienteering.

What are the 5 Rules of contour lines?

How to find coordinates on a topographic map?

What are Eastings and Northings on a topographic map? Eastings are the vertical lines running from the top to bottom and divide the map from west to east. Northings are the horizontal lines running left to right and divide the map from north to south. Each easting and northing is numbered on the map margin at 1 km intervals; numbers are used to find a grid reference.

What is called a contour line? A contour line is a line drawn on a topographic map to indicate ground elevation or depression. A contour interval is the vertical distance or difference in elevation between contour lines. Index contours are bold or thicker lines that appear at every fifth contour line.

How to read landforms on a topographic map?

What does a depression look like on a topographic map? Contour lines that show a depression, crater, or sinkhole on a map are represented by dashed lines (hachure marks) on the inside of a contour line. The elevation of the first depression contour is the same as the nearest regular contour line.

How to identify a ridge on a topographic map? Ridge: A landform with an elevated crest that slopes down on the sides. Ridges are also shown by “V” or “U” shaped contours, but these “point” downhill, toward lower elevations. Remember, water never runs along ridge tops.

Why do contour lines never touch or cross? Contour lines never cross on a topographic map because each line represents the same elevation level of the land. A particular point of land cannot be at more than one elevation, so only one contour line will pass through that spot. For example, a contour line may show where an elevation of 2,500 feet of the land is.

How do you read a topographic map?

What are the lines on a map called? Two types of imaginary reference lines are used to locate positions or points and to make accurate globes and maps. These lines are called parallels of latitude and meridians of longitude.

What is the key to a topographic map? The distinctive characteristic of a topographic map is that the shape of the Earth's surface is shown by contour lines. Contours are imaginary lines that join points of equal elevation on the surface of the land above or below a reference surface, such as mean sea level.

What is a legend on a map? A legend shows the meaning of the symbols, colors, and styles used to represent geographic data on the map. Legends consist of examples of the symbols on the map with labels containing explanatory text. Legends have patches that match the map symbols, which are often points, straight lines, rectangles, or color ramps.

What is a title on a map? The map's title tells what the map is about, revealing the map's purpose and content. For example, a map might be titled “Political Map of the World” or “Battle of Gettysburg, 1863.”

What is a key on a map? Map keys are often boxes in the corner of the map, and the information they give you is essential to understanding the map. Symbols in the key might be pictures or icons that represent different things on the map. Sometimes the map might be colored or shaded, and the key explains what the colors and shades mean.

What are the 4 ways height is shown on a map? Contour line method, layer tinting method, digital elevation method and hill shading method are all used to show the elevation or height of the land on a map.

What are the criteria for a topographic map? A topographic map is a detailed and accurate illustration of man-made and natural features on the ground such as roads, railways, power transmission lines, contours, elevations, rivers, lakes and geographical names. The topographic map is a two-dimensional representation of the Earth's three-dimensional landscape.
