**Che tessuto è il cervello?** Tessuti che rivestono il cervello All'interno della scatola cranica, l'encefalo è ricoperto da tre strati di tessuto denominati meningi: Dura madre (strato esterno) Aracnoide (strato mediano) Pia madre (strato interno)

**Come il cervello elabora i pensieri?** I nostri pensieri, comportamenti e sentimenti non sono altro che il risultato di una complessa rete di miliardi di neuroni che si trasmettono segnali l'un l'altro, consentendo così la comunicazione tra le diverse regioni del cervello. Questo è quello che abbiamo creduto finora.

## **Come si fa ad allenare il cervello?**

**Come il cervello elabora le informazioni?** Il sistema nervoso sensoriale è coinvolto nella ricezione e nell'elaborazione di informazioni sensoriali. Queste informazioni vengono ricevute attraverso i nervi cranici, attraverso i tratti del midollo spinale e direttamente nei centri del cervello esposti al sangue.

**Come si chiama la materia del cervello?** La materia grigia, o sostanza grigia, è la componente tissutale del sistema nervoso centrale ad alta concentrazione di corpi di neuroni.

**Come è composto il cervello umano?** Il cervello è un organo diviso in due emisferi uniti dal corpo calloso, che comunica con il midollo spinale attraverso il tronco encefalico. Il suo strato più esterno è la corteccia, mentre al suo centro si trovano i gangli basali e alla sua base, in posizione posteriore, il cervelletto.

**Cosa fa ragionare il cervello?** Il cervello è responsabile dell'integrazione di tutte le informazioni ricevute dagli organi sensoriali e organizza una risposta. Controlla le funzioni motorie, emotive e tutte le più alte funzioni cognitive: ragionamento,

espressione emotiva, memoria (Squire, 1992), apprendimento...

**Come fa il cervello a ricordare?** Ogni informazione viene memorizzata grazie alla formazione di una specifica rete neuronale, prima nell'ippocampo e poi nella corteccia, dove viene definitivamente conservata. L'ippocampo è la struttura indispensabile alla fissazione della traccia di memoria.

**Perché il mio cervello pensa sempre?** In alcuni casi, può essere legato a eventi traumatici o stressanti, in altri può essere causato da ansia generalizzata o da eccessivo perfezionismo e ipercriticità. Alcuni studi suggeriscono che l'overthinking possa essere legato a una difficoltà del cervello nel processo di elaborazione delle emozioni.

**Cosa fa stare bene il cervello?** La pasta integrale, il pane integrale, il riso integrale, la crusca e il germe di grano contengono elevate quantità di acido folico e tiamina. Queste sostanze facilitano l'afflusso del sangue al cervello e lo aiutano a lavorare meglio.

**Cosa attiva il cervello?** Il 99% dell'energia cerebrale deriva dal glucosio in condizioni fisiologiche normali. Inoltre, il glucosio è il substrato di molti neurotrasmettitori (i messaggeri chimici del nostro cervello), come il glutammato e il GABA, che sono l'interruttore unico di tutte le nostre cellule cerebrali.

**Cosa fare per tenere attivo il cervello?** Interagire con altre persone stimola il cervello, favorisce la comunicazione, l'empatia e la condivisione di esperienze. Partecipare a conversazioni, frequentare corsi o club, essere attivi nella comunità e mantenere legami sociali solidi possono contribuire a mantenere il cervello attivo e sano.

**Come il cervello elabora le emozioni?** Le emozioni si “producono” nel nostro cervello grazie al lavoro dei neurotrasmettitori nella trasmissione delle informazioni tra i neuroni: questo è anche il modo in cui agiscono gli psicofarmaci, aumentando o inibendo la presenza di determinate molecole a livello cerebrale.

**Come fa il cervello a imparare?** Il cervello umano impara creando degli schemi che verranno utilizzati come “scorciatoie” per affrontare la realtà in futuro. Questi schemi stimolano due tipi di memoria: la memoria dichiarativa, cioè riconoscere un dato, un

2002 2008 YAMAHA XV1700 ROAD STAR WARRIOR MIDNIGHT SILVERADO 1700

MOTORCYCLES

fatto o un oggetto, e la memoria procedurale, cioè sapere come si fa qualcosa.

**Come il cervello elabora il pensiero?** Lo sviluppo avviene attraverso tre meccanismi. 1 – Introduzione di informazioni attraverso gli organi di senso. 2 – Esposizione dei concetti elaborati attraverso il linguaggio parlato e scritto. 3 – Interazioni con gli altri uomini attraverso il linguaggio per correggere quanto elaborato.

**Che tessuto compone nervi e cervello?** Il Sistema Nervoso, organizzato in Sistema Nervoso Centrale (SNC), che comprende encefalo e midollo spinale, e in Sistema Nervoso Periferico (SNP), formato dai gangli e dai nervi spinali ed encefalici, è costituito dal tessuto nervoso che ha la funzione di ricevere, elaborare e trasmettere gli impulsi.

**Che apparato è quello del cervello?** Racchiuso all'interno della scatola cranica, il cervello è un organo vitale, che appartiene al sistema nervoso centrale.

**Come si definisce il cervello?** L'encefalo, che si trova nel capo, e il midollo spinale, che sta dentro la colonna vertebrale, formano il sistema nervoso centrale, la parte più importante e complessa del sistema nervoso, che corrisponde a quello che comunemente chiamiamo cervello.

**Cosa riveste il cervello?** Gli emisferi sono costituiti all'interno da una sostanza bianca, da una massa grigia alla base (corpo striato) e da una sostanza grigia che li riveste: la corteccia cerebrale.
