**What is the difference between C4 and C5 corrosion?** Category C4, for steel thickness losses of 50 and up to 80 microns. Defined to assess industrial and coastal areas with moderate salinity such as chemical plants, swimming pools, ships and shipyards. Category C5, for steel thickness losses of 80 and up to 200 microns.

**What are the four standard types of corrosion damage?** List the four standard types of corrosion damage. negligible damage, damage repairable by patching, damage repairable by insertion, and damage necessitating replacement of parts.

**What does ASM chart stand for?** ASM stands for 'Algorithm State Machine 'or simply state machine is the another name given to sequential network is used to control a digital system which carries out a step by a step –by step procedure . It should be noted that ASM charts represent physical hardware and offers several advantages.

**What does the ASM do?** An assistant stage manager is the eyes, ears and hands of the stage manager in the back-stage area.
