

# Agilent 33220a psi

## Download Complete File

**What is the pressure for the Agilent nebulizer?** Nebulizing gas pressure The optimum nebulizer pressure increases as the solvent flow rate increases. A good starting value for APCI is 30 psig at a flow rate of 400  $\mu$ L/min.

**What is the pressure range of Agilent HPLC?**

**How much does the Agilent 33220a weight?** USB, GPIB and LAN interfaces included. 100 - 240 Vac, -5%, +10%; 50/60Hz operation. Weight: 7.5 lb; Size: 104 mm (4.1 in)H x 261 mm (10.28 in)W x 303 mm (11.93 in)D.

**How many PSI is a nebulizer?** Generally, they require between 30-45 PSI per 8ML of medication, making them ideal for multiple uses. Treatments generally last anywhere from 5-10 minutes, but timing can vary depending on medication size, power type and particle size.

**What is the pressure of a nebulizer compressor?**

**What is the PSI for HPLC?** Pressure maxima 6000 psi (420 kg/cm<sup>2</sup>) at 10 mL/min.

**What is standard HPLC pressure?** The pressure limit lies in the range of 200 bar for these materials. For preparative HPLC columns based on silica gel, the pressure limit highly depends on the column hardware: The maximum pressure is dependent on the diameter of the column (16 and 20 mm ID 400bar, 30 mm ID 300 bar, 50 mm ID 200 bar).

**What is the maximum pressure for the Agilent flow cell?** Agilent UPLCs are designed upto 1,300 bar.

**What is the function of Agilent 33220A?** The Agilent Technologies 33220A is a 20 MHz synthesized function generator with built-in arbitrary waveform and pulse capabilities. Its combination of bench-top and system features makes this function generator a versatile solution for your testing requirements now and in the future.

**What is the volume of the Agilent 1260 system?**

**What is a waveform generator used for?** A waveform generator produces precise waveforms, including sine, square, triangle, and ramp, as well as arbitrary, user-defined waveforms using sequences of data or streaming continuously from a host or peer-to-peer instrument within mixed-signal test systems.

**How many psi is SCBA?** An open circuit SCBA typically has three main components: a high-pressure gas storage cylinder, (e.g., 2,216 to 5,500 psi (15,280 to 37,920 kPa), about 150 to 374 atmospheres), a pressure regulator, and a respiratory interface, which may be a mouthpiece, half mask or full-face mask, assembled and mounted on a framed ...

**What PSI is breath pressure?** A normal person is capable of a breath pressure of 1-2 psi, so by pressure breathing you can increase your lung pressure from 10.1 psi to 11.1-12.1 psi during each exhale, closer to the 14.7 psi you are used to.

**How many PSI is a oxygen tank?** A full cylinder will read about 2000 psi (pounds per square inch). the gauge reaches the flow rate your doctor prescribed.

**What is the best PSI for a nebulizer?** Nebulizers work better at higher pressures. To get the best possible sensitivities and lowest %RSD, 100 psi or more is desirable. Our Legere, Mira Mist CE and Ari Mist HP nebulizers use 70 - 125 psi for 1 L/min, which means that most torches at . 8L/min will require 50 - 80 psi for the nebulizer to optimize.

**How many PSI is a compressor?** Most compressed air equipment is designed to operate at around 90 – 100 psi (6 – 7 bar). For this reason, most people only need a compressor with a maximum pressure of 7 bar. For some applications, an higher pressure is needed, like 15 or 30 bar.

**What is the PSI for a breathing air compressor?** According to Compressed Air Services, a high-pressure breathing air compressor is both versatile and complex. It will take ambient air through multiple stages of compression, ultimately ensuring a consistent air pressure of up to 6,000 PSI.

**What is the pressure on the Agilent 1290?** Pressure range up to 1200 bar (>17400 psi) allows for fast chromatography on short columns, high resolution on long columns using sub-two micron packing material and a wider choice of mobile phase viscosity.

**What is the maximum pressure for the Agilent flow cell?** Agilent UPLCs are designed upto 1,300 bar.

**What is the pressure of the Agilent 1260 pump?** The 1260 Infinity II Quaternary Pump is a gradient pump that uses low-pressure mixing for UHPLC gradient formation and solvent blending from up to four solvents. This pump operates at pressures up to 600 bar and flow rates up to 10 mL/min.

**What is the best flow rate for a nebulizer?** The small-volume nebulizer should be operated at gas flows of 6 to 8 L/minute and with a total solution volume of about 4 mL to optimize the volume of drug delivered.
