Trisomy 18: A Radiological Perspective

What is Trisomy 18?

Trisomy 18, also known as Edward's syndrome, is a genetic disorder caused by the presence of an extra copy of chromosome 18. This extra chromosome disrupts the normal development of the fetus, leading to a range of physical abnormalities.

What are the Radiological Features of Trisomy 18?

The Radiological Society of North America (RSNA) has identified several characteristic radiological signs associated with Trisomy 18. These include:

- **Cranial abnormalities:** Microcephaly, occipital prominence, enlarged fontanelles, and a wide skull
- **Facial abnormalities:** Cleft lip and palate, micrognathia, and low-set ears
- **Extremity abnormalities:** Congenital heart defects, rocker-bottom feet, and overlapping fingers

- **Renal anomalies:** Horseshoe kidney, bilateral renal agenesis, and polycystic kidneys
- **Other:** Omphalocele, diaphragmatic hernia, and nuchal edema

How is Trisomy 18 Diagnosed?

Trisomy 18 can be diagnosed prenatally through amniocentesis or chorionic villus sampling. Diagnosis can also be made postnatally based on physical examination and chromosomal analysis.

What is the Prognosis for Trisomy 18?

Trisomy 18 is a life-threatening condition with a poor prognosis. Most infants with Trisomy 18 die in the womb or shortly after birth. Those who survive may have severe developmental delays and multiple health problems.

What is the Role of Radiology in Trisomy 18?

Radiological imaging plays a crucial role in the diagnosis and management of Trisomy 18. By identifying the characteristic radiological features of the condition, imaging can help guide prenatal and postnatal care. Additionally, imaging can help monitor the progression of the condition and identify potential complications.

- **Team Approach:** The TEACCH Approach involves a team of professionals, including parents, educators, and therapists, who work together to support the individual.

Benefits of the TEACCH Approach

Research has shown that the TEACCH Approach can improve outcomes for individuals with ASDs, including:
