

# Biodiversity multiple choice question

## [Download Complete File](#)

**What are biodiversity question answers?** What is biodiversity exactly? “Biodiversity” not only refers to the number of individual species, but also the genetic variety within and between species and the diversity of ecosystems and regions. The richness of functions and interdependencies in the relationships of species within ecosystems is also a factor.

**What is biodiversity multiple choice?** Biodiversity refers to all living organisms that exist on earth and cooperate for sustainable living. Irrespective of size and species, biodiversity includes plants, animals, microorganisms, etc.

**What is a good question about biodiversity?** Why is biodiversity important to the planet? Is biodiversity under threat? What are the main causes of biodiversity loss? How does climate change impact biodiversity?

**What is biodiversity quizizz?** Biodiversity, aka biological diversity, usually refers to. the same species in a general location. the number of different species in a given area. the number of animal species in a given area. the number of plant species in a given area.

**What are 4 examples of biodiversity?** They include bacteria, protozoa, fungi, flowering plants, ants, beetles, butterflies, birds, fishes, and large animals such as elephants, whales, and bears.

**What 3 things define biodiversity?** The term biodiversity (from “biological diversity”) refers to the variety of life on Earth at all its levels, from genes to ecosystems, and can encompass the evolutionary, ecological, and cultural processes that sustain life.

**What are the 3 major sections of biodiversity?** Biodiversity is usually explored at three levels: genetic diversity, species diversity and ecosystem diversity. These three levels work together to create the complexity of life on Earth.

**What are the two main types of biodiversity?** In fact, there are three main types of biodiversity: genetic, species and ecosystem. Let's explore the role each plays in making agriculture productive, nutritious and resilient and meet some of the rural people doing their part to protect it. Every individual plant or animal has a distinct combination of genes.

**What best defines biodiversity?** Biodiversity is all the different kinds of life you'll find in one area—the variety of animals, plants, fungi, and even microorganisms like bacteria that make up our natural world. Each of these species and organisms work together in ecosystems, like an intricate web, to maintain balance and support life.

**What is the #1 threat to biodiversity?** Loss of Biodiversity: A Global Crisis Earth's rich and diverse ecosystems are under constant threat. Perhaps the greatest of all threats to Earth's biodiversity is deforestation. While deforestation poses a threat to ecosystems worldwide, it's especially devastating for tropical rainforests.

**What are 5 interesting facts about biodiversity?**

**What is the main problem in biodiversity?** Biodiversity, or the variety of all living things on our planet, has been declining at an alarming rate in recent years, mainly due to human activities, such as land use changes, pollution and climate change.

**What is 5 biodiversity?** Biodiversity (or biological diversity) is the variety and variability of life on Earth. It can be measured on various levels. There is for example genetic variability, species diversity, ecosystem diversity and phylogenetic diversity.

**What makes a biodiversity?** Summary. Biodiversity includes not only the world's species with their unique evolutionary histories, but also genetic variability within and among populations of species and the distribution of species across local habitats, ecosystems, landscapes, and whole continents or oceans.

**Which best explains biodiversity?** The phrase that best describes biodiversity is "all species present in an ecosystem. Biodiversity is the sum of all life within a

particular area at any scale.

**Can we live without biodiversity?** Biodiversity is essential for the processes that support all life on Earth, including humans. Without a wide range of animals, plants and microorganisms, we cannot have the healthy ecosystems that we rely on to provide us with the air we breathe and the food we eat.

**What can affect biodiversity?** Land use change, pollution, poor water quality, chemical and waste contamination, climate change and other causes of ecosystem degradation all contribute to biodiversity loss and, can pose considerable threats to human health.

**What are the four 5 threats to biodiversity?** So what's causing this biodiversity crisis? Climate change, pollution, habitat loss, overexploitation of species and invasive species have been identified as the five major threats to biodiversity, globally.

**Which biome has the most biodiversity?** Tropical rainforests have an emergent layer of tall trees over 40 m tall, an overstory of trees up to 30 m tall, a sub-canopy layer of trees and tall shrubs, and a ground layer of herbaceous vegetation. Tropical forests have the highest biodiversity and primary productivity of any of the terrestrial biomes.

**What are 5 reasons why biodiversity is important?**

**What is the difference between diversity and biodiversity?** Diversity is the general term which means state of being diverse or different. Biodiversity is the biological term that means different variety of living organisms present in the biosphere.

**What is diversity question answers?** Diversity is the occurrence of various types of living beings which differ from one another in external form and appearance, internal structure, nutrition, behaviour, habitat, etc.

**What is the definition of biodiversity quizlet?** Biodiversity. the variety of species/ life in an ecosystem, it includes where the organisms live and the genetic variation between different species and within a species itself. Fauna.

**Which of the following answers best describes biodiversity?** Answer and Explanation: The phrase that best describes biodiversity is "all species present in an ecosystem. Biodiversity is the sum of all life within a particular area at any scale.

**What 5 categories help answer the question why is biodiversity important?** Defining why it matters is a way of highlighting the benefits of the natural world. The importance of biodiversity reflects the many different values that we bestow up it, including economic, ecological, cultural, scientific and recreational.
