Thermodynamics: Questions and Answers Using Cengel Boles 7th Edition

Q1: Explain the first law of thermodynamics.

A1: The first law of thermodynamics states that energy cannot be created or destroyed, only transferred or transformed. In a closed system, the change in internal energy is equal to the heat added to the system minus the work done by the system.

Q2: What is the difference between heat and work?

A2: Heat is a form of energy that flows between two objects at different temperatures. Work is a form of energy transferred by a force acting over a distance. Heat and work can both be used to change the internal energy of a system.

Q3: What is entropy and how is it related to the second law of thermodynamics?

A3: Entropy is a measure of disorder or randomness. The second law of thermodynamics states that the entropy of a closed system always increases over time. This means that systems tend to become more disordered over time.

Q4: Explain the concept of a thermodynamic cycle.

A4: A thermodynamic cycle is a series of processes that return a system to its initial state. The work done by the system during a cycle is equal to the net heat added to the system. Thermal efficiency is a measure of the work output of a cycle relative to the heat input.

Q5: How does Cengel Boles 7th Edition contribute to the understanding of thermodynamics?

A5: Cengel Boles 7th Edition provides a comprehensive and up-to-date treatment of thermodynamics. It includes clear explanations, illustrative examples, and a wide range of solved problems. The text is highly readable and accessible to students of all levels.
