The Principles and Power of Vision

What is Vision?

Vision is a clear mental image of what you want to achieve in the future. It's a guiding force that helps you stay focused and motivated, even when times get tough.

Why is Vision Important?

Vision is essential for success in all areas of life. It provides direction, purpose, and inspiration. Without vision, you're like a ship without a rudder, drifting aimlessly through life.

The Principles of Vision

There are five key principles of vision:

1. **Clarity:** Your vision should be clear and specific. Don't be vague or general.
2. **Focus:** Choose one or two main goals to focus on. Don't try to do too much at once.

3. **Action:** Your vision should inspire you to take action. Don't just sit around and wait for things to happen.
4. **Persistence:** Don't give up on your vision just because you encounter obstacles. Keep going until you achieve your goals.
5. **Flexibility:** Be willing to adjust your vision as needed. Circumstances change, so you need to be able to adapt.

The Power of Vision

Vision has the power to:

- **Motivate:** Your vision will inspire you to take action and achieve your goals.
- **Guide:** Your vision will keep you on track, even when times get tough.
- **Unite:** Your vision can unite a team or organization behind a common goal.
- **Create:** Your vision can help you create a better future for yourself and others.

How to Develop a Vision

Developing a vision takes time and effort. Here are a few tips:

- **Think about your values.** What's important to you? What do you want to achieve in life?
- **Imagine your ideal future.** What does your life look like in the future if everything goes according to plan?
- **Write down your vision.** Once you have a clear idea of what you want, write it down. This will help you to stay focused and motivated.
- **Share your vision with others.** The more people who know about your vision, the more likely you are to achieve it.

Year 3 Maths Overview: Autumn Term 1: Reasoning Fluency

Reasoning Fluency: What is it?

Reasoning fluency refers to the ability to apply logical reasoning skills to solve mathematical problems efficiently. It involves making connections, finding patterns, and decomposing problems to find solutions.

Key Questions to Focus On:

- Can students explain their reasoning behind mathematical calculations?
- Can they identify and use different strategies to solve problems?
- Can they effectively analyze and interpret mathematical information?

Overview of Activities:

- **Number and Place Value:** Reasoning activities will focus on comparing and ordering numbers, rounding to the nearest 10 or 100, and finding missing values in number sequences.
- **Addition and Subtraction:** Students will develop fluency in solving addition and subtraction problems up to 1000, including finding unknown values in equations and using number bonds to decompose numbers.
- **Multiplication and Division:** The focus will be on understanding multiplication as repeated addition and division as sharing. Students will practice solving simple multiplication and division problems within the 12 times table.
- **Fractions and Decimals:** Reasoning activities will involve understanding fractions as parts of a whole and recognizing their equivalence. Students will also explore decimals up to two decimal places.
- **Measurement:** The emphasis will be on developing an understanding of length, mass, and capacity, including measuring, comparing, and estimating measurements.

Assessment:

Assessment will be ongoing throughout the term through observation, questioning, and written work. The aim is to identify areas where students demonstrate reasoning fluency and areas where further support is needed.

Example Questions and Answers:

1. **Question:** Explain how you could solve $345 + 278$ without a calculator.

Answer: I could break 345 into $300 + 40 + 5$, and then add the three parts to 278: $300 + 200 = 500$, $40 + 70 = 110$, and $5 + 8 = 13$. $500 + 110 + 13 = 623$.

2. **Question:** A bag of marbles has 15 red marbles, 12 blue marbles, and 8 yellow marbles. What percentage of the marbles are blue? **Answer:** The total number of marbles is $15 + 12 + 8 = 35$. The percentage of blue marbles is $(12/35) \times 100 = 34.29\%$ (rounded to the nearest percent).
