Studi di Funzione: Esercizi Svolti di Analisi Matematica

Introduzione

Uno studio di funzione è una procedura analitica che fornisce informazioni dettagliate sulle caratteristiche di una funzione, tra cui il dominio, il codominio, i punti di intersezione con gli assi, la monotonia, le derivate e gli asintoti. Gli esercizi svolti di analisi matematica sono un modo efficace per comprendere i concetti alla base degli studi di funzione.

Esercizio 1: Determinare il dominio e il codominio

Domanda: Determina il dominio e il codominio della funzione $f(x) = (x-1)/(x+2)$.

Risposta:

- Dominio: Tutti i numeri reali tranne -2, poiché la divisione per zero è indefinita.
- Codominio: Tutti i numeri reali tranne 0, poiché $(x-1)/(x+2)$ non può mai essere uguale a 0.

Esercizio 2: Calcolare i punti di intersezione con gli assi

Domanda: Trova i punti di intersezione della funzione $g(x) = x^2 - 4$ con gli assi coordinati.

Risposta:

- Intersezione con l'asse x: Risolvendo $g(x) = 0$, otteniamo $x = \pm 2$.
- Intersezione con l'asse y: Ponendo $x = 0$, otteniamo $g(0) = -4$. Quindi il punto di intersezione è (0,-4).

Esercizio 3: Studiare la monotonia

Domanda: Determina gli intervalli di monotonia della funzione $h(x) = x^3 - 3x + 2$.

Risposta:

- Calcolando la derivata prima $h'(x) = 3x(x-1)$, si ottengono i punti critici $x = 0, 1$.
- Studiando il segno della derivata negli intervalli $(-\infty, 0)$, $(0, 1)$ e $(1, \infty)$, si conclude che:
 - Monotona crescente in $(-\infty, 0)$
 - Monotona decrescente in $(0, 1)$
 - Monotona crescente in $(1, \infty)$

Esercizio 4: Calcolare gli asintoti

Domanda: Trova gli asintoti orizzontali e verticali della funzione $k(x) = (2x-4)/(x-2)$.

Risposta:

- Asintoto orizzontale: $y = 2$, ottenuto ponendo $x \rightarrow \infty$ e $x \rightarrow -\infty$ nel limite di $k(x)$.
- Asintoto verticale: $x = 2$, ottenuto ponendo $x \rightarrow 2$ nel limite di $k(x)$.

Conclusione

Gli esercizi svolti di analisi matematica forniscono una solida base per comprendere gli studi di funzione. Lavorando attraverso questi esercizi, gli studenti possono sviluppare le competenze analitiche necessarie per risolvere problemi complessi in analisi matematica e oltre.
