How to counter Grey Knights 40k?

Why are GREY Knights so strong? Each Grey Knight is an accomplished, powerful psyker. Thus, they are trained to channel their psychic energies into a halo of protective wards known as The Aegis. Are the GREY Knights the most powerful chapter? Blessed with both transhuman physiology and the most advanced Imperial weaponry, the Grey Knights would be the most elite force of the Adeptus Astartes. However, it would not be enough for them merely to be strong of body and skilled at war, though in this they surpass even other Space Marines.

Who do the GREY Knights answer to? The chapter operates in oppressive secrecy, beyond the knowledge of the Adeptus Terra and even the High Lords of Terra — as a part of the Ordo Malleus, the Grey Knights are answerable only to the Ordo and the Emperor.

What is the best nemesis weapon in GREY Knights? Nemesis Force Halberd
This extra reach is invaluable to a Grey Knight, often allowing him to land a telling blow before he is within reach of the enemy's own melee weapons. A Grey Knight can easily use such a weapon one-handed in short deadly chops.

Are GREY Knights stronger than Astartes? Having said that he wouldn't have wanted them to be unbeatable, hence their strength is in numbers and psychopathic

focus. Which raises my question: the Custodes are essentially his ultimate weapon but for special use only. So are the grey knights, both of whom are superior to your average Astartes.

Who is stronger, Custodes or Grey Knights? Then the Custodes wins 99% of the time. In the lore, Custodes in a complete land slide. They have access to technology only allowed to be utilized by them. Are custodes Space Marines? Astartes are the basic Space Marines. Each is genetically engineered and inserted with the genes of their Primarch. Custodes are the Emperors personal guard, and it is rumoured that they have the gene-seed of the Emperor himself (though not confirmed).

Do all GREY Knights have Terminator armor? Terminator Armour is exceedingly rare amongst the forces of the Adeptus Astartes. Space Marines hold it a great honour to be permitted to wear such a suit in battle, and it is only members of the Chapter's elite 1st Company to whom this honour is normally granted in Codex Astartes-compliant Chapters.

Do the GREY Knights have a Titan? Titan is the largest moon of the gas giant Saturn in the Sol System and is wholly controlled by the Grey Knights Chapter of psychically-active Space Marines who serve as the Chamber Militant of the Inquisition's Ordo Malleus.

Who would win custodes or grey knight? Custodes. GK's are nice but AC's we're made to crush, if needed, everything the galaxy could offer up. They're (AC) not invulnerable but if it's a generic GK vs a 'generic' AC. Then the Custodes wins 99% of the time.

Are Custodes stronger than a primarch? They are made more like the primarchs than a space marine and are far stronger, faster, and better equipped than the space marines. To put it in perspective Alpharius was a smaller primarch due to having a split soul with his twin. The 10000 custodes would be like having 10000 smaller primarchs.

Who is the most powerful Space Marine in Warhammer? Mephiston is the Chief Librarian of The Blood Angels and is the most powerful psyker of all the Space Marines. Originally known as Calistarius, Mephiston is the only known gene-son of Sanguinius to overcome the Black Rage twice.

Seeds: Volume One: 1 mm

What is the volume of a 1 mm seed?

The volume of a 1 mm seed can be calculated using the formula for the volume of a sphere: $V = \frac{4}{3}\pi r^3$, where r is the radius of the seed. Since the diameter of the seed is 1 mm, the radius is 0.5 mm or 0.0005 meters.

Plugging this value into the formula, we get:

$$V = \frac{4}{3}\pi(0.0005 \text{ m})^3 \quad V = 5.236 \times 10^{-10} \text{ m}^3 \quad V = 523.6 \text{ nanoliters}$$

Is the volume of a 1 mm seed a significant amount?

While the volume of a single 1 mm seed is small, the volume of a large number of seeds can be significant. For example, a bag of 100,000 1 mm seeds would have a total volume of approximately 52.36 ml. This is roughly equivalent to the volume of a small bottle of water.

How can the volume of a 1 mm seed be measured?

There are several methods that can be used to measure the volume of a 1 mm seed. One common method is to use a graduated cylinder or volumetric flask. The seed is first placed in the cylinder or flask, and then water is added until the volume reaches a known mark. The difference between the initial volume and the final volume is equal to the volume of the seed.

Another method for measuring the volume of a 1 mm seed is to use a micrometer. A micrometer is a precision instrument that can be used to measure very small distances. The seed is placed between the jaws of the micrometer, and then the jaws are closed until they touch the seed. The distance between the jaws is then read directly from the micrometer scale.

What are some applications for knowing the volume of a 1 mm seed?

Knowing the volume of a 1 mm seed can be useful for a variety of applications, such as:

- Calculating the weight of a seed
- Determining the density of a seed
- Estimating the number of seeds in a given volume
- Designing seed storage and handling systems
