**What did doctors used to be called?** The medical hierarchy of practitioners was physician, surgeon and apothecary, and each had defined functions. Physicians, who had gone to university, were the real 'doctors', and surgeons and apothecaries, who trained by apprenticeships, were 'mister'.

**What is the biggest disease word?** The longest word in any of the major English language dictionaries is pneumonoultramicroscopicsilicovolcanoconiosis (45 letters), a word that refers to a lung disease contracted from the inhalation of very fine silica particles, specifically from a volcano; medically, it is the same as silicosis.

**What are the most commonly misspelled medical words?**

**What is the most recognized dictionary in the world?** More than a dictionary, the OED is a comprehensive guide to current and historical word meanings in English. The Oxford English Dictionary (OED) is widely accepted as the most complete record of the English language ever assembled.

**Who was the man who wrote the first dictionary?** This month we take a look at what is widely believed to be the first modern English dictionary, Samuel Johnson's

**The Effects of UV Light and Weathering on Plastics and Elastomers (2nd Edition)**

**What is the significance of this book?**

This comprehensive guide delves into the effects of ultraviolet (UV) light and environmental weathering on the properties and performance of plastics and elastomers. It provides valuable insights for professionals in the plastics and rubber industries, as well as researchers and students seeking a better understanding of polymer degradation mechanisms.

**How does UV light impact plastics and elastomers?**

UV light is a major factor in the degradation of polymers. It leads to chain scission, cross-linking, oxidation, and other chemical changes that can alter the mechanical, optical, and thermal properties of these materials. This can result in decreased strength, discoloration, embrittlement, and premature failure.

**What are the primary weathering factors that affect plastics and elastomers?**

In addition to UV light, various environmental factors contribute to the weathering of plastics and elastomers. These include temperature, humidity, rainfall, salt spray, and atmospheric pollutants. These factors can accelerate the degradation process,

causing materials to deteriorate over time.

### **How can the effects of UV light and weathering be mitigated?**

There are several strategies to mitigate the detrimental effects of UV light and weathering on plastics and elastomers. These include:

- Using UV stabilizers and antioxidants
- Applying protective coatings
- Employing weathering-resistant polymers
- Optimizing design and fabrication techniques

### **What are the applications of this knowledge in the plastics and rubber industries?**

Understanding the effects of UV light and weathering is crucial for developing durable and long-lasting plastic and rubber products. It enables manufacturers to select appropriate materials, design components effectively, and predict the service life of their products in various outdoor environments. By mitigating the effects of degradation, industries can improve the safety, performance, and aesthetics of their products.

**What are the ten peaks of human history?** Durant's ten "peaks" of human progress is also excellent and thought provoking. These include: speech, fire, animal domestication, agriculture, social order, morality, tools, science, education and writing/printing.

### **What are the 4 epochs of human history?**

### **What are the 12 highest peaks in the world?**
