## **Unit 1 Investment Environment Mock Exam: CFA UK**

### **Question 1:**

Identify the three main categories of economic resources.

#### **Answer:**

1. Land (natural resources)
2. Labor (human resources)
3. Capital (produced resources)

### **Question 2:**

Explain the concept of market efficiency and its implications for investors.

#### **Answer:**

Market efficiency refers to the degree to which security prices reflect all available information. In an efficient market, investors cannot consistently outperform the market by buying and selling stocks based on publicly available information. This has implications for investment decision-making, as investors should focus on asset allocation and diversification rather than trying to time the market.

### **Question 3:**

Describe the role of the Federal Reserve (Fed) in regulating the US economy.

#### **Answer:**

The Fed is the central bank of the United States. It plays a crucial role in regulating the economy by setting interest rates, controlling the money supply, and supervising financial institutions. The Fed's primary objective is to maintain price stability and maximum employment.

**Question 4:**

Explain the relationship between inflation and interest rates.

**Answer:**

Inflation is a measure of the increase in the general price level over time. Interest rates are the cost of borrowing money. When inflation is high, investors demand higher interest rates to compensate for the loss in purchasing power due to inflation. As a result, central banks typically raise interest rates to combat inflation.

**Question 5:**

Discuss the ethical responsibilities of investment professionals.

**Answer:**

Investment professionals have a fiduciary duty to their clients. This requires them to act in the best interests of their clients, put their clients' interests before their own, and avoid conflicts of interest. Ethical responsibilities also include adhering to the codes of conduct and regulations set by regulatory bodies, such as the CFA Institute Code of Ethics and Standards of Professional Conduct.

**Transport Processes and Separation Process Principles Includes Unit Operations 4th Edition Solution for Problem****Question:**

In a distillation column, a binary mixture of benzene and toluene is being separated. The feed stream contains 50% benzene and 50% toluene by mass. The distillate stream contains 90% benzene and 10% toluene by mass, while the bottoms stream contains 10% benzene and 90% toluene by mass. The feed rate is 100 kg/h. Determine the distillate and bottoms flow rates.

**Answer:****Step 1: Perform a mass balance on the column.**

---

$$\text{Feed} = \text{Distillate} + \text{Bottoms}$$

$$100 \text{ kg/h} = D + B$$

**Step 2: Perform a mass balance on benzene in the column.**

$$\text{Benzene in Feed} = \text{Benzene in Distillate} + \text{Benzene in Bottoms}$$

$$0.5 * 100 \text{ kg/h} = 0.9 * D + 0.1 * B$$

**Step 3: Solve the equations simultaneously.**

$$D = 55.56 \text{ kg/h}$$

$$B = 44.44 \text{ kg/h}$$

**Therefore, the distillate flow rate is 55.56 kg/h and the bottoms flow rate is 44.44 kg/h.**
